Federal Funds: Where Does All the Money Go?

Touchdown

In America's space spectacles there have been so many memorable moments that new words, or nuances of words, have been assembled to describe them all. All those "lift-offs," "rendezvous," "jettisons," "re-entries," "splashdowns." And now, on the flat sands of the Mojave Desert, a "touchdown," one as far routed as any that John Anderson's own grid-nauts may have sought and found.

Well, here at the Brown Fund, we had our own closely watched lift-off last September and we await our own eventful "touchdown" on June 30. That's when our own "piggy-back" to the big Campaign for Brown, the annual Brown Fund campaign for 1980-81 ends. And the dollars you have sent into this space called Brown will enable the University to make the most of its unique place in the world of higher education.

It's been a busy mission. Thousands of you have ventured into the vast space of our fifty states — and beyond — phoning, writing, pre-

senting, asking on Brown's behalf. The Brown Fund goal this year is \$3.5 million in unrestricted funds. That's higher than we've ever gone before, and to get there we ask a lot of you who have not yet signalled "A-Okay" to the University to do so now. And please, be as generous as you can.

If you've already joined our space program, our thanks. For a University is a space program of sorts. Expensive to run, with a payout always in the future. But what a future! Help us conquer the problems of "inner space" so that we may continue to send the best-prepared graduates in the country off into the wider space where their knowledge and talents and skills are so desperately needed.

The Brown Fund
If we don't, who will?

Problem:
Preserving Capital
for your Heirs

Solution:
A Charitable Trust
with Brown

Here is how you can preserve your assets for your children or grandchildren. With a charitable lead trust funded with securities, closely-held stock, income-producing real estate, or a partnership interest, you can make a gift to family members at a reduced tax cost. Not only will you save taxes but your heirs will receive a bigger inheritance. If you have a substantial estate and want to learn more about how this tax planning idea could work for you and your family, call or write us today.

The Campaign for Brown

CARRYING THE MAIL

'Disgusted and pleased'

Editor: I am a 1979 Black American graduate of Brown who has, with disgust and pleasure, read of the current debate on campus having to do with increases in the cost of attending Brown and whether or not to maintain current levels of financial aid to allow everyone accepted to attend. I am disgusted because I can hear, laced throughout the controversy, the undertones of privileged people who think it is their birthright to have access to the best of opportunities to succeed in this country. I am pleased because it gives me an excellent opening with which to get some things dealing with the financial and racial off my chest.

I have an imaginary book that I keep on the shelf of my apartment entitled, *Those Crazy Enjoyable Years at Brown 1975-79*. My guess is that one of the main reasons I've chosen this title is because my family could afford the cost of my attending (and I understand Brown is cleverly trying to admit more and more Blacks like this). I didn't have to worry about making enough money over the summer to complete my financial package, getting a job that might interfere with my studies, or trying to find a way to repay loans once I graduated. Had I any of this to worry about, I'm sure my memoirs on Brown would have a slightly different heading. It is also for this reason that I feel those who have attended and are still attending Brown under similar circumstances have no right to pass judgment on the future of those who require financial help. I am referring specifically to the comments of one David Gold in the February issue. You're forgetting, Dave ole boy, that you and I and anyone else so lucky didn't earn that luck, we were born into it.

Given the above argument, and in line with the current feelings of America's suddenly "moral majority" (that being, down with "reverse discrimination" and up with "true" equal opportunity), it appears Mr. Gold's views and those of other elitists are hypocritical. Supposedly the Ivy League opens the doors to the best of opportunities for its graduates. If this is true, and Brown University is debating whether or not to provide adequate financial aid to those who need it, the school has but three just options. First, it could open its doors only to those whose families are not privileged. The money for this would come via contributions by the privileged, who could afford it because their kids wouldn't be at such schools.

The privileged kids wouldn't need to go because by virtue of their status they need no more advantages. Second, it could open its doors to everyone regardless of financial status and ensure they could attend, never having to worry about money. Or third, Brown and all schools like it could maintain high costs, and little or no financial aid but renounce their doctrine of "Ivy Leaguism" putting themselves on equal footing with "Joe Average State University." Those are the only options, because it is with sheer polyunsaturated racist elitist gall that anyone would even discuss maintaining the high quality of an institution that claims to open doors previously closed, at the expense of those, who through no fault of their own, can't afford the price. Or, put another way Harlem's Einstein can't go, then Scarsdale shouldn't either.

Finally, I'd like to link this subject to another that was constantly debated while I was at Brown. That has to do with the belief that minorities are insular. All while I attended (and I suspect still) minorities were criticized for associating with each other more than whites, or not being full members of the university community. It was a peculiar liability of "those people" just like the one that their excellence at dancing and basketball. Well, let me inform you that I've found a certain species of the human animal down here in Nashville that looks like and sounds like White Americans, yet displays a similar insularism. They attend the same predominantly Black medical school as I do, they're 10-12 percent of the class, they sit together in the lecture hall, they eat together, they don't come to class meetings, and they probably won't contribute as alumni. Yet no one is criticizing and forcing them to do all of this. My hypothesis is that they are indeed members of that same genus that made up Brown's majority, genus Caucasian. I'm sure that if we the majority got together and decided that they were expendable and couldn't get their M.D. degrees because they didn't spread themselves like salt among pepper, they'd raise hell. And what's more I'd raise hell right along with them.

Tougaloo

Editor: When I received my copy of BAM, the obits and class notes got my attention and that is about all. However, in the

March issue, the piece on Tougaloo caught my eye.

My father, William John Ballou, Brown '97, taught at Tougaloo 1900-4. I have an old photograph album, several pages of which are devoted to Tougaloo. I am writing to [Tougaloo] President George Owens to inquire whether he would be interested in having these photographs for the Tougaloo archives.

WILLIAM S. BALLOU '25
Chester, Vt.

The Bruinaires

Editor: While cleaning out some old and seldom-used storage containers a short time ago, I ran across several photographs taken during my undergraduate years. The photos depicted various friends with three commonalities — all were wearing light brown corduroy jackets; all had their mouths open as if in song; and each held a mug filled with an unidentified liquid. They were the Bruinaires, and the photos were taken during various singing engagements.

Not long after that excursion into janitorial sanity, I happened to run into two people who looked so much like two of the faces in the photographs that I was hardly surprised when they turned out, in fact, to be the adult versions of those singing friends. As one might suspect, we began to play the game entitled "whatever became of . . . ?" I am sorry to report that we were not terribly successful, but we did come up with a plan: each of us was to contact several Bruinaires and discover whether there would be any interest in a reunion.

I am now happy to report that there is a good deal of interest, and we have planned just such an affair for this spring. We invite all former Bruinaires to contact the alumni office for details, and we would appreciate your including this invitation in the *Brown Alumni Monthly*. Many thanks.

Josiah

Editor: It is gratifying to note that Josiah Carberry is being used on the back cover of the current *Brown Alumni Monthly* [March] to promote *Brown: A Pictorial Album*. He is, of course, an enduring institution of the University. No other college or university has, to my knowledge, produced and nurtured his like.

As his only begetter, I think it is appropriate to note that his first scheduled lecture in Sayles Hall, or, for that matter, anywhere else, was billed as "Indo-European Ceramics and their Relation to Greek Art." Unfortunately, as is well remembered by his friends at that time (circa 1928), the event had to be canceled because of the illness of his elder daughter, Lois.

Wherever Professor Carberry may be during the next few months, he will surely be

an enthusiastic salesman for *Brown: A Pictorial Album*. He is still an energetic man of the scholarly world; in fact, he is able to read the entire Sunday edition of the *New York Times* by Tuesday of each week.

One correction, if I may: Professor Carberry's forwarding address is known to the undersigned.

ROBERT B. MACDOUGALL '22
Philadelphia

Editor: "Hey Bruno — Welcome to Vermont. — Josiah S. Carberry"

Josiah was in Burlington, Vermont, last month as evidenced by the above copy of a scrap of note paper tucked under the wiper blades on my 1972 VW. My daughter, a junior at University of Vermont, had taken the car back to Vermont in January while hers was being repaired. Among other decals on the windows are two from Brown (and one from the University of Vermont). Carla was unaware of the reputation of the good professor, but she would have recognized the *Pictorial Album* if he had it tucked under his arm as he wandered the streets of Burlington.

GEORGE R. BLESSING '50
Flanders, N.J.

'Incredible conceit'

Editor: In his letter in the March issue [A. Wilson] Whitman objects to [Robert] Schwartz's letter, which in turn objects to BAM's deriving humor from male reaction to sunbathing women. Mr. Whitman states that "thousands of women would not sunbathe in public if they objected to a man's reaction to their beauty. They would hide under the long black robe the Ayatollah Khomeini recommends or sunbathe in perfect isolation."

Has Mr. Whitman considered that it might possibly be somewhat uncomfortable to sunbathe in a long black robe or a bit difficult to find perfect isolation? What incredible conceit that he believes women wear bathing suits strictly to entice men.

This is the same kind of reasoning that leads to the conclusion that women are raped because "they asked for it."

'Pigging Out'

Editor: What for some is pigging out (BAM, March) is for others a chronic, progressive, and potentially fatal disease called compulsive overeating. While Barbara Raab may be able to expand her eating habits in safety, others are trapped in a terrifying pattern of overeating and vomiting. Food, like alcohol, can be a drug to numb painful feelings. But what starts out as a help and a comfort soon turns to torture. A compulsive overeater can't stop the binges — pigging out takes over all of one's life. School work, self-esteem, normal relationships can all be

Newton, Mass.

Youth vs. maturity

Editors: Generally universities have
ught to be perceived as the place where a
erson's value would be placed ahead of his
rice. Now it appears (article on Mellon
rant, Under the Elms, BAM, March) that at
own the mask will be shed after 1982. Can
one think of a way to restructure the work
ad? Must youth be pitted against maturity?
fter all, postdoctoral fellowships without
aching responsibilities probably provide
sufficient "hands on experience." And a
reed sellout offers a most undignified way

to end one's career. Imaginative young fac-
ulty hired to replace the bought-off may
spend thirty years wondering what the Uni-
versity will have in store for them when their
time comes!

JAMES H. HODDIE '65 Ph.D.
Boston

Is this any way to run an election?

Editor: Here it is spring again, and I am
being asked to participate in another of the
spring rituals — voting in the Brown alumni
election. On the one hand I want to be one of
the 8,000 hardy souls that use the democratic
process to help Brown and on the other hand
am faced with little data to make an informed
selection.

Should I vote for Mr. Cutler because he
was summa cum laude or Mr. Hays because
he belongs to the Tacoma Yacht Club? The
election brochure invites me to add another
honorary title, on the base of previous hon-
orary titles, to their list of accomplishments.
Is this really the way to run an election? Are
there no issues to be discussed, no sweeping
plans of action to be debated?

I am scared to death that my vote (on the
basis of a pretty picture) could elect a trustee
that wants to turn Brown into a Harvard-
style grad school or a Big Ten football school.
Since a valid way for me to choose among the

candidates is not at hand, my ballot will help
fill the circular file for another year.

UNDER THE ELMS

Brown to the community: We want to be a good neighbor

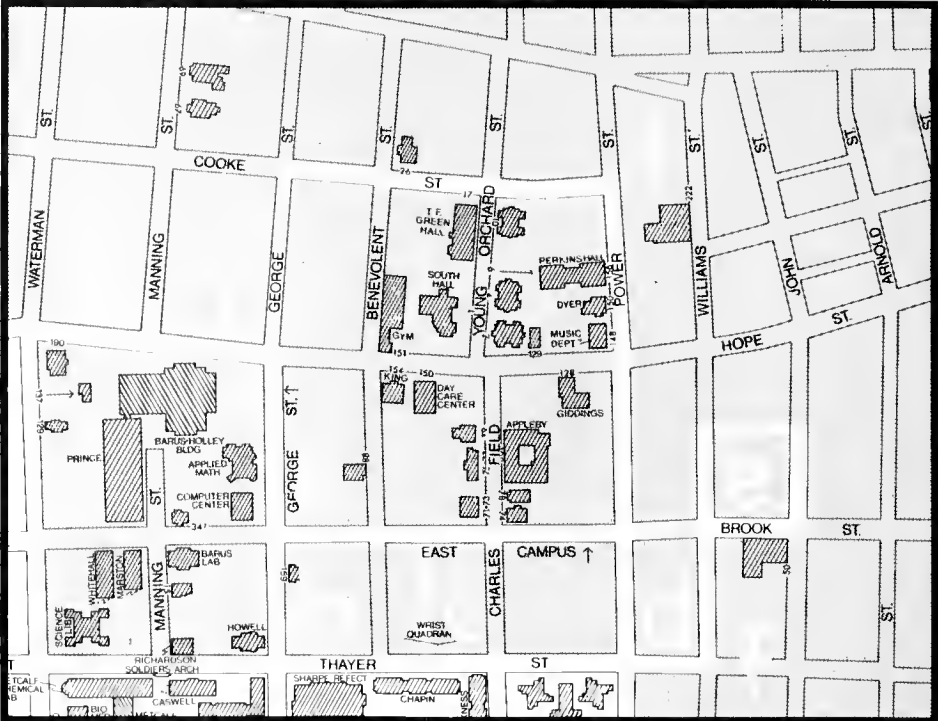

Like death and taxes, a near certainty in life is tension between a university and the community around it. Through the years, Brown's relationship with the community around it, particularly Fox Point, has probably been no worse — and no better — than similar situations in other cities.

Last month, Brown attempted to show the community it wanted to be a good neighbor by presenting — to various community and governmental groups — a long-range development plan under which it would divest itself of most of the land it owns in Fox Point and consolidate its major academic and residential buildings in a seven-block area near the campus. The plan will be presented to the Corporation at its June meeting, and if approved, will guide Brown's future development and its philosophy of land use in the area around the east side of the campus.

It includes a recommendation for building a new 160-bed dormitory and a new student health center, as well as expanding the computer sciences facilities and providing a new two-story parking deck on Power Street between Thayer and Brook Streets.

It also includes a recommendation for moving at least three houses onto the east side of the former Bond Bread bakery in Fox Point, to be used for student, faculty, and staff housing. All other Brown-owned land in Fox Point — the former Bryant College athletic field at the corner of Gano and East George Streets, and the site of a nuclear research facility on the Seekonk River — as well as two lots on Manning Street, would eventually be sold, according to the recommendations.

The plan, which covers a thirty-two-block area roughly bounded by Waterman, Governor, Arnold, and Thayer streets, was presented by Richard Dober of Dober and Associates, Inc., the Boston-based consulting firm that developed it, and Robert A. Michley, vice president for university relations at Brown.

The new plan sets up five "policy areas" on the east side of the campus.

Dober's development plan divides the area into five separate "policy areas," each one of which currently contains Brown-owned land.

Policy Area A (see map) is bounded by George, Waterman, Thayer, and Hope Streets and is expected to contain the heaviest concentration of science and engineering buildings. This area includes the Sciences Library, Barus and Holley and Prince engineering buildings, and the new geology/chemistry research building now under construction. While no additional buildings are presently planned, Dober's recommendations suggest that any future high density science or research facilities be located in this area.

Policy Area B includes the block bounded by George, Brook, Thayer, and Benevolent Streets, as well as half of the block bounded by Thayer, Brook, Benevolent, and Charles Field Streets. This area is also designated for academic buildings, but on a smaller scale than those projected for Area A. Any new

buildings in this area will be two or three stories in height and in keeping with the scale of other buildings in the vicinity, Dober said.

Policy Area C, the remainder of the Thayer-Brook-Benevolent-Charles Field block as well as the block bounded by Thayer, Charles Field, Brook, and Power Streets, is designated for student residential buildings and a proposed new student health facility. This will be the site of the new dormitory, which could be built within the next year if funds become available. Salvageable houses displaced by the construction will be moved to Area E.

Policy Area D, the site of a current parking lot bounded by Power, Thayer, Brook, and Williams Streets, will be the site of a new, two-level parking deck if Dober's recommendations are accepted. The structure will take advantage of a natural grade on the site, entrances and exits will be on Power Street, and the entire structure will be landscaped as attractively as possible, Dober said.

Policy Area E, a six-block area bounded by George, Cooke, Williams, and Power Streets, as well as the one-block area containing the Bond Bread site (Williams, John, Brook, and Hope Streets), is designated as a residential area for Brown students, faculty, and staff, as well as a community residential area. Brown's attitude in this section will be to conserve and preserve the area mostly as a residential district. The plan calls for moving any salvageable houses displaced by construction in other areas onto the Bond Bread site, to provide housing for students and faculty until additional residential facilities are available.

Policy Area F, the remainder of the area to the east of the campus, is seen as outside Brown's immediate interest. Plans call for the University to remove itself from the area as either a land owner or land user; the land Brown does own in this area will eventually be sold, if the plan is accepted. In addition, Brown will make no attempt to acquire new land in this area.

While no timetable was attached to the implementation of any of these recommendations, the student dormitory and health services facility are clearly top priorities, Reichley said. There is also strong pressure to expand the facilities for the computer sciences department with the addition of approximately 3,500 square feet of space to the existing building at Thayer and George Streets.

Dober and Reichley made five separate presentations of the plan in one day. In the morning and early afternoon, small meetings were held in the Biltmore Hotel for government officials, representatives of the Providence Preservation Society and the Fox Point Community Organization, and members of the news media. In the evening an open meeting was held in Grant Recital Hall, attended by about 75 people. Reichley said that this extensive public disclosure and discussion of plans before they are approved by the Corporation is a new approach for Brown.

The principal opposition to the plan at the meetings came from some members of the Fox Point Community. At the evening meeting Carol Oliviera, president of the Fox Point Neighborhood Housing Development Corporation, and Larry Novak, its executive director, were skeptical and repeatedly asked that Brown make "a commitment" to help the Fox Point community.

Both specifically asked the University to agree to return to the community eventually the houses that will be moved to the Bond Bread site.

Mrs. John Gwynne, who lives on Williams Street across the street from where the proposed parking deck will be built, was more enthusiastic about the plan. "I think it's the best plan we've ever seen," said Mrs. Gwynne, who has in the past opposed Brown's plans in the area. "If the University had to do it any way, I couldn't imagine them doing it any better way than this." Her remarks were greeted by applause by many in the audience.

Rhode Island state senator Lila Sapinsley, whose district includes much of the Fox Point community, praised the University both for the plan itself and for its concern for informing and discussing the plan with area residents. "This public forum should help make the people understand how the decision will be in the best interests of Fox Point residents," he said.

Vice President Reichley promised those who expressed concern about the plan that he would take their concerns back to the Brown administration and the Corporation. The next move is the Corporation's.

R.M.R. and Susan Heitman

CONSTRUCTION: Four major building projects underway

Around campus this spring, it's difficult finding a place that's out of earshot of the backhoes, bulldozers, and jackhammers. Construction crews are working full blast on a number of projects as Brown moves ahead with the largest segment of construction it has ever undertaken at one time. Renovations and expansions of existing buildings are underway as well as the construction of two major new facilities.

The largest venture in the works is the construction of the geology-chemistry complex (already known as the "geo-chem" building), which both departments will use for research purposes. Presently, geological and chemical research of international importance is being conducted in facilities that no longer meet the demands of modern scientific technique. The new four-story building, scheduled for completion by January 1983, will provide approximately 70,000 square feet of research

JOHN FORASTE

space, in addition to new department offices and conference rooms.

The geology-chemistry project was begun in March, and when ground was broken for the \$17-million building, a small surprise turned up. Investigators from Brown's Public Archeology Laboratory uncovered on the site an assortment of artifacts, including an arrowhead believed to be between 3,000 and 5,000 years old. Eighteenth-century

Looking south: The geology-chemistry building is being constructed at Brook and George Streets.

glass and ceramic trash was found in the same stratum as the prehistoric material; apparently, the relics had been mixed together by cultivation of the soil.

Few other prehistoric remains have been found on Providence's East Side, although evidence found elsewhere in southern New England indicates that the region has been occupied for 10,000 years or more. The geology-chemistry

building site, on the corner of Brook and George Streets, was once the residence of Brown's first president, James Manning. Later, an engineering building stood on that ground and for the past twenty years it has been a parking lot.

At the Aldrich-Dexter Athletic Complex, work on the new indoor athletic center is nearing completion. The building should be ready to open in September and will contain a six-lane,

two-hundred-meter track, four basketball courts, ten tennis courts, and two volleyball areas. A synthetic playing surface on the building's 88,000-square-foot roof will be suitable for football, soccer, field hockey, and lacrosse.

In part, the new athletic center will be heated with excess energy from the Smith Swimming Center, one reason

NOTES FROM THE GREEN

By Cynthia Ross '84

Just strength and vision

My view of the Brown freshmen crew team had been one-sided from the start. Sharing a floor with four oarsmen, better known to the Brown community as "crew-jocks," I got a healthy glimpse of the bodies sprawled out on our floor stretching calves and thighs before the daily run to the boathouse, the pained expressions at the prospect of doing "the hills," and the sweat and red faces when practice was over. I heard talk of "Albin," "the shell," "power ten," and countless other terms in the lingo of the sport. Yet, despite my exposure, crew remained a bit of a mystery to me. I decided to check it out.

Marston Boathouse is only about two miles from campus, but a run there takes you past a noisy highway, old houses, and decrepit shops that make Brown's red bricks and cobblestones seem much farther away. As I approached the building's graveled entrance, it occurred to me how easy it would be to spend four years at Brown and never know of this place's existence.

The afternoon I chose to learn about crew was a cold one for March, and rain was threatening. But Coach Albin Moser, a large-framed and husky veteran of Brown crew himself, quickly congratulated me on picking a "perfect rowing day." "Sunny days are no good," he explained, "'cause they're usually windy. Now today, there's not a breath of wind. The water's nice and calm."

As he readied his motor boat, or "launch," for the day's session, Albin spoke endearingly of the sport that he has coached for over a decade. "Crew attracts very mature individuals. Thinking, that's the difference. You've got to concentrate on every little thing you're doing, or the boat won't go. That isn't easy; it takes more mental preparation than most sports." He was silent for a moment. Then, as if confirming it to himself, "Concentration, that's the difference."

I watched as the oarsmen, in two groups of four and one of eight, transported the large boats from inside the boathouse to the water's edge. They were unaware of it, but it was truly a performance. Suited in gold wind-breakers and brown gym shorts, they marched down a long wooden ramp with the bulky vessels held high over their heads. The action was almost rhythmic. They stopped at the ramp's edge, and in one smooth movement, turned the boats over and placed them in the water so gently that there wasn't a splash. The job would have seemed perfectly effortless, except I could see the leg muscles straining as the boats made their way down, and I knew that it just *looked* easy.

I was to discover that apparent ease again when I watched the boats from the launch. Again, I was impressed by the way the squads of four and eight were able to engineer these big wooden boats so that a task mechanical and regular looked fluid and smooth. The uniformed yellow jackets, the constant tug on the oars, the even four or eight heeding the commands of the coxswain — all seemed at first almost regimented. But only at first. A moment passed, and the regiment turned into grace. At certain times as I watched, the boats seemed to possess a momentum of their own, plowing through the water as if motors were attached. But what struck me was that there were no motors, just strength and unison.

We returned to the boathouse as dark was approaching, and I thanked Albin for the afternoon. As I started my run back to Brown, I looked over my shoulder to get a last glimpse of the boats coming in — slower now, but still kind of majestic. I had finally seen the other side to this sport, and I was truly impressed.

Crew is no doubt as demanding physically as it is mentally. The team practices six days a week, with a double session on Saturdays, and three days a week call for running "the hill" — the

big hill that separates Brown from what seems to me to be the rest of the world. The oarsmen sprint it six times per workout, and they don't give much thought to the hour. It's not unusual for my hall to take a break from studying at 11 p.m. and see one or two of these jocks returning, red-faced and bodies gleaming with sweat, from the hill.

But, they tell me, it's worth it. I spoke to four freshmen rowers, whose experience ranged from virtually none in any sport to three years rowing at prep school; perhaps the only thing they agreed about was that it was worth it.

Andy Nelson, from Evanston, Illinois, is perhaps living proof of Albin's theory that crew "takes a few days to pick up but a career to perfect." Andy had a job after school throughout high school, and never played a sport. But he's enjoying crew's new dimension. He picked it up fast, but now there are so many little things to work on. You have this mental picture of the perfect stroke and you keep working toward that. It's hard, but a lot of fun."

Sean Duffy ran track and cross-country for four years at his high school in Ridgewood, New Jersey, and if you can't tell from his multitude of marathon t-shirts, his lean and muscular frame will tell you that he was good at it. He simply *looks* in shape. Although Sean chose not to run at Brown, his attraction to crew speaks for his devotion to the sport. "I'm basically not a very competitive person. I like individual sports. Crew seemed to have a lot of things in common with running — the self-discipline and punishment that forces you to reach your own potential, believe in the Greek system of education — it embodies book learning and development of the body."

On the other hand, Valerio Fermeo, Sean's roommate, looks upon crew as something very different from the sports he played in high school in Milan, Italy. "Crew has the extra challenge that I didn't have in soccer, tennis, or

skeetball in that I have to concentrate every day. When I played soccer, I didn't think about how what I was doing was affecting the team. But in rowing, you have to be thinking about every thing you're doing. You can't have an off day, because the whole boat will suffer."

Torrey Foster rowed for three years at Exeter and has already made most of the discoveries that the others are making now. But he spoke perhaps most candidly of the sport. "To me, racing is the purest form of human competition. Rowing can be frustrating — you have to always be working on getting over small obstacles — but I don't know of another sport that offers the thrill of the race. You're pushing as hard as you can, and you know the whole boat is pushing, and you cross the finish line ahead of somebody else. It's an amazing feeling."

Do you ever feel like quitting, like it's not worth it? I asked. They all reflected for a moment with this question, and their responses were the same. Sometimes, yes, it gets frustrating. You feel like nothing is going right. But when it is going right, it makes everything worth it.

"When it's going right," Torrey explained, "it's heaven." Valerio agreed. "When everybody is pulling together, and the boat is going right, it feels effortless. You sense it from the water under the boat. All you hear is a little giggle. The boat seems to move by itself. It's a great feeling."

That is what makes it worth it.

With this issue, Cynthia Ross becomes a regular contributor to the BAM.

CONSTRUCTION

continued

planners chose to locate the two buildings next to each other. The heretofore unutilized heat rising from the pool area, locker rooms, squash courts, and clothes dryers will be transferred to the new field house via an above-ground piping system. Such energy conservation techniques are expected to save an equivalent of about 68,000 gallons of fuel oil per year.

When renovation of the John Hay Library is completed later this month, the seventy-one-year-old building will be better suited to housing its rare books, manuscripts, and other artifacts. An air-conditioning system has been installed to maintain a storage environment of proper temperature and humidity, critical factors for preserving paper. Also, new security and fire-alert systems will make the library a safer repository. A new conservation laboratory has been installed so that state-of-the-art restoration and chemical preservation techniques can be utilized. Space has also been made for the rare book bindery, which will move to the John Hay from its present location in the John D. Rockefeller Library.

The interior of the John Hay has been restored to what researchers believe is a close approximation to the original decor. On the third floor, an area is being prepared to house the Anne S. K. Brown collection of military items, soon to be donated to the University.

The entire John Hay renovation will cost an estimated \$4.3 million, funded in part by a challenge grant from the National Endowment for the Humanities.

Another project being undertaken this spring is the expansion of the Bio-Medical Center on Brown Street. An open terrace below this building has gone unused since the structure was built in 1969. Now, however, the University is spending \$2.1 million to enclose the terrace. Next January, when the enclosure is complete, 30,000 square feet of space will have been reclaimed providing new office space, conference rooms, a student lounge, and a 120-seat lecture hall. Such facilities have been sorely needed in recent years, as the Program in Medicine expanded from a two-year to four-year program.

— Jay Butera

FINANCIAL AID:

\$300,000 extra for 1981-82

The debate over financial aid to students (*BAM*, February) continued unabated through the spring semester. Almost no issue of the *Brown Daily Herald* was without some reference to it; there were public meetings and demonstrations, including a march around University Hall as the Advisory and Executive Committee of the Corporation held its regular meeting in April.

Going into that meeting, at which the principal topic was financial aid, the administration was still publicly committed to a financial-aid figure of \$6.1 million for 1981-82. (That figure, recommended in December to the Advisory Committee on University Planning by a subcommittee of the Committee on Admission and Financial Aid, had been attacked as too small from the minute it first became public knowledge.)

After the A&E meeting, President Swearer announced two actions designed to ease the situation somewhat for the 1981-82 year:

1) A special, one-year \$200,000 emergency fund will be created, to be used as a cushion against potential reductions in federal student-aid programs. This fund will be financed by an anonymous restricted gift.

2) Brown will add \$100,000 to its projected 1981-82 budget in order to allow a modest reduction in the amount of "self-help" that students on financial aid are expected to provide. In the current 1981-82 budget projections, each student is expected to provide the first \$3,100 of his or her financial-aid need, through a combination of jobs and loans, an amount \$700 higher than the 1980-81 self-help requirements.

"Not only is this a very large increase in one year," the president said, "it would also put self-help at Brown above that at most of our serious competitors. This action will allow us to reduce the requirement somewhat, perhaps by about \$100 per student in the three upper classes."

The president noted "the very difficult question" of providing sufficient financial aid so that Brown can maintain a diverse student body at the same time as it operates a balanced budget. "I hope that this action will help us to ease this situation."

Meanwhile the need and the search

continue for the money that will provide a long-range solution to the problem.

R.M.R.

OPENINGS:

Want a glimpse of Jupiter, Mars, Saturn?

The most spectacular of the shots from Viking I and II or the Ranger missions make the inside of *Time* and *Newsweek* and then disappear. But for those who can make their way to Brown's Sciences Library, these images — plus microfilms, maps, transparencies, books, and pamphlets — are a mere elevator ride away. The Brown Regional Planetary Data Center recently opened its doors on the eighth floor of the library. "Basically, this collection is everything that has been photographed of the surfaces of planets in about twenty NASA missions," explained James Head, associate professor of geological sciences and the Data Center's director. "That's about — oh, thousands and thousands of images."

At a formal ceremony on the mezzanine of the Sciences Library, the center was dedicated to the memory of the late professor Thomas A. "Tim" Mutch, who died in a climbing accident in the Himalayas last October. Mutch established Brown's planetary geology group — four faculty and several graduate students and postdoctoral candidates who study the surfaces of the planets, largely with NASA funding. Mutch wrote a definitive book on the geology of Mars and oversaw the imaging team for the Viking I and II missions to Mars in 1976. It was also Mutch's idea to develop regional centers for the voluminous output of NASA's space missions so that researchers and students could get at them. Brown's is the seventh such center in the nation, and the regional headquarters for New England.

NASA donated the materials; the library provides the space and a librarian, John Crawley, who serves as curator and has spent the past several months scouring NASA vaults for appropriate material. The Data Center contains images from Mars, Jupiter, Saturn, Venus, and their satellites, among other places.

Anyone with a Brown ID or a letter of reference can go up and take a look at the closest glimpses we have of our neighbors in the solar system. J.T.

Novelist Barry Beckham.

THE FACULTY:

The difficulty of getting published

"Black artists — all artists — are so naïve about the interplay between art and economics. We don't know anything about marketing."

"I wrote my first novel, and gave it to a publisher. They loved it — but they didn't do much promotion. My second novel got no promotion at all. Eleven paperback publishers turned it down before we got a paperback contract."

"The reviews were good, but the books didn't sell well. And now with the economy the way it is, publishers are wary of publishing authors whose books may not sell."

Barry Beckham — associate professor of English and director of Brown's Graduate Writing Program — has gotten over his economic naïvete.

Although his second novel, *Runner Mack*, was chosen one of the *New York Times*' best books of the year for 1972, it has taken him nine years to get another book published. That book, *Double Dunk*, has just come out as an original paperback after having been turned down in manuscript by the publisher that originally commissioned it.

It is the fictionalized biography of Earl "The Goat" Manigault, a Harlem basketball player whose nearly legendary skill will never be seen on a professional court because he got himself detoured by heroin addiction. The book — powerful, fast-moving, evocative — has been described by the *New York Post*

as "a poignant, nakedly harsh story of what might have been. . . . Adult language and adult situations notwithstanding, this is a book which every high school and perhaps junior high school student should read before they are swept up in the fraudulent case the losers make for lifestyles which are pure fantasy. . . ."

Beckham's difficulty with publishers is one that is being shared by a number of black novelists, according to a recent article in the *New York Times Book Review* (February 22). "Whereas the late '60s," wrote author Mel Watkins, ". . . publishers were eagerly courting any blacks who could set the experiences to paper, some publishers presently contend that the mere inclusion of the word 'black' in a book's title hurts its chances."

Beckham agrees, up to a point. "During the black arts movement in '60s, every publisher had to have a black book, a black author," he says. "Some writers got published who shouldn't have, and after a while people got disinterested, especially after the recession. Many of the writers who are now having difficulty are good but not exceptional writers."

"On the other hand, there are many non-black writers who are not exceptional but who write interesting books that are selling."

Beckham is painfully aware of what the lack of promotion on his previous books may have cost him in sales, and thus in a track record that will make other publishers willing to take a chance on another book. With *Double Dunk*, he has been sending out review copies himself, as widely as he can. The review printed in the *New York Post* (by columnist Jerry Izenberg) is a result of one of these mailings.

He is no longer bitter over *Double Dunk*'s initial rejection (although at the time it was devastating: "I turned you down," he wrote at the time. "I hated publishers, I hated basketball players, I hated editors, I hated books, I hated writing. . . ."). Instead, he has emerged with a more realistic awareness of how the publishing business works.

"Economics are really more of a factor than literary merit," he says. "The bottom line is, how many books can you sell?"

"My basic psychological posture now is never to be discouraged — at least not for a long time — by someone who doesn't like one of my ideas."

"You have to have more confidence

JOHN FORASTI

yourself than in anybody who criticizes your work, particularly since we're a market-oriented society. Something one person says won't go is somebody else's great idea. I really believe that there is somebody out there who could support any idea — if you can only find them." — Susan Heitman

Editing academia's professional journals

Businessmen read *The Wall Street Journal*. Movie people pore over *Variety*. The music industry swears by *Billboard*. The world of academia has its professional bibles, too. Although rarely seen by the general public, the somber-covered thick-paged professional journals of academe play a role not quite duplicated anywhere else: they give a stamp of certification to current scholars and current scholarship; they name new fields and bind together ever-splintering old ones. For the professional academic, an article published in a prestigious journal can be as influential, perhaps more so, than a book — and for the young scholar, its presence in a curriculum vitae is vital to a successful career.

To give an idea of the scope of scholarly journals, there are more than 2,500 published yearly in this country alone. The average scholar, according to a recent study, keeps up with four or five, and regularly reads three to five articles a week (we're talking twenty-page articles, here, by the way).

Two such journals have recently been in the news at Brown. After twelve years at the helm of what may be the most influential journal of economics in a densely packed field, George Borts is leaving as managing editor of the *American Economic Review*. As Borts steps down, Prof. Roderick Chisholm takes on an important journal in philosophy, *Philosophy and Phenomenological Research*, which moves here from the State University of Buffalo, where it was published for forty years. Associate professor Ernest Sosa, Chisholm's departmental colleague, will be assistant editor.

What does a university gain by having a leading journal published on its premises? Prestige, certainly — and some very busy professors. The office space the professors use for editorial tasks is donated; in the philosophy journal's case, so will the services of a part-time secretary. None of the profes-

sors involved get a reduction in their teaching load. Borts was able to receive a small salary from the American Economic Association. For Chisholm and Sosa, "It's really a service to the profession."

Graduate students can find themselves plenty to work on for a journal, if they so choose. "I don't know if the presence of the *AER* attracted graduate students or not," says Borts, "but it certainly contributed to their education, because I used them to read galley proofs, to read manuscripts, and to work the math. We used quite a few graduate students that way, and I think they benefited from it, if only by seeing what constituted an acceptable paper — getting a sort of step up on what the state of research was in the profession."

The main task of the editor of a scholarly journal is to receive manuscripts and decide which should be printed and which not. Chisholm and Sosa report they are already "inundated" with manuscripts, even though their quarterly has accepted articles that will fill the next three issues. They read through the manuscripts themselves and do an initial weeding out. Manuscripts then move to a senior faculty member to a senior scholar in the specialty about which the article is written, who decides on its merits and sends it back with a recommendation, pro or con.

For the *American Economic Review*, Borts used a more complicated system to wade through the 700 manuscripts the journal got every year. Junior faculty members in various parts of the country were sent manuscripts in batches of ten or twelve — they did the weeding out and sent the articles back with synopses and recommendations and only then would Borts start reading the articles himself. The 60-percent portion of submissions that survived the initial cut were then sent off to anyone of 350 "referees" — again, senior professionals in the specialty of the paper's subject. Along the line, the decision was also made whether to have an article included in full — or in a short synopsis.

All in all, it's a time-consuming process, and backlogs of up to two years are not uncommon for journals such as these. The *AER* is backed up three issues. But the wheels of academic approval do not turn quickly, and no one seems to be able to find a quicker system, much to the chagrin of young academics, for whom a two-year wait

on the publication of an article can mean the difference between tenure and driving cabs.

These two journals share another quality: they are both appealing to the broad ranks of a profession made up of increasingly narrow disciplines. They publish, in other words, works from every aspect of the profession. The question of the role of a journal addressed to a profession of specialists can be a troubling one. "With the proliferation of specialized journals," Borts says, "there's always a debate as to what the *AER* should print. There were some people who said that it should print only expository pieces, or pieces that could go right into classroom use, and there were others, including myself, who felt that it should continue to print original research — and that expository pieces should compete with original research for space. We sort of regard it as a flagship, if you like, a flagship of the profession — and it competes with all the specialized journals. That doesn't mean that a reader will fail to understand 90 percent of the papers. What it means is that someone in one specialty has a higher likelihood of being able to tell someone in another specialty what he's doing because of the communication of methodologies."

Chisholm views his journal the same way: "We want to keep this a journal of some breadth. It becomes a problem not so much that we want to avoid specialized articles — this is not a popular journal — but it's rather that we don't want to restrict ourselves to a single philosophy or school of philosophy . . . It's not that we want the articles to be accessible to all philosophers, but rather that we have a breadth of philosophical fields represented. If it were an article on aesthetics, say, we would want it to be at least as technical as anything published in the *Journal of Aesthetics*."

Costs of printing and of paper have jumped dramatically over the last decade, and journals find themselves on increasingly weak financial ground. These two, however, are in the lucky category of journals whose existence is not threatened by financial constraint. The *AER* is published under the auspices of the American Economic Association, which is the main professional body for economists; its members receive the *AER* and another journal in return for their dues. *Philosophy and Phenomenological Research* reverses the

process: a subscription to the magazine automatically makes you a member of the International Phenomenological Association. The price, Chisholm notes, is very low for such a journal — \$10 for individuals and \$12 for libraries.

Academic journals — and all publications — face a fascinating technological future. Brown is now investigating the establishment of a typesetting system tied to the University Computer Center. Chisholm and Sosa hope to use the system, which could cut typesetting costs from \$30 to \$2.50 per page. Both men have computers in their homes that they use to store bibliographies and take corrections for preparing their own manuscripts, and they hope to use these for other manuscripts in the future. The philosophy department will be getting its own computer terminal by next year.

Future computer and print technologies offer the promise of saving millions on paper and printing costs in the day to come when an entire journal can be transmitted electronically from its place of origin to libraries and individual subscribers across the country.

Could the roles of such journals — which, after all, are a way of getting information and duplicating — become

outmoded by the new electronic information systems? George Borts says no. He sees a place for journals even in this technological era. "There still has to be some method," he says, "by which papers go out of existence simply because they're lousy. Not everything written is worth reading, and not everybody working in the field is worth listening to. The existence of the new technology is not going to change the role that journals play in helping the reader decide what's worth reading and what isn't worth reading . . . the tradition in economics has been for the journals to decide that something is publishable, and you're always going to have someone playing that role." J.T.

IN THE NEWS:

The continuing debate: Evolution vs. creationism

The debate over man's origins — evolution vs. special creation — has been unfolding in a succession all its own; from inside the laboratories, it has moved to the legislatures, the courtrooms, the universities, and, on April 10, to Meehan Auditorium. Dr. Henry

Morris, director of the Institute for Creation Research, in San Diego, challenged Dr. Kenneth Miller '70, assistant professor of biology at Brown, who took the affirmative of the proposition: "The Theory of Evolution is Superior to the Theory of Special Creation as an Explanation for All the Scientific Evidence Related to Origins."

The theory of creationism is that, some 10,000 years ago, a supernatural designer created all species with enough genetic variation to undergo micro-evolution, the natural selection within species, but not to evolve through macro-evolution into new kinds of species. Rejecting the evolutionary theory of fossil stratification over billions of years, creationism accepts the model of geological catastrophism: that a world-wide deluge layered animals on the earth's surface.

Morris and Miller addressed these theories for three hours, arguing over the age of the earth and the meaning of fossils. They moved through heavy scientific explanations and a prolific supply of slide reels of graphs, charts, and archaeological findings. The audience of 1,600 Brown students and other members of the Providence community kept

PEOPLE AND PROGRAMS

□ Eleven Brown faculty members have been named department and program chairmen this year. They are: **Andrew Browder**, chairman of the Department of Mathematics; **Richard Fishman**, chairman of the Department of Art; **Lambert Ben Freund**, chairman of the Division of Engineering; **David Josephson**, chairman of the Department of Music; **Anthony Molho**, chairman of the Department of History; **Sumner Twiss**, chairman of the Department of Religious Studies; **Don B. Wilmeth**, chairman of the Department of Theatre Arts. Also: **George Bass**, acting chairman of the Afro-American Studies Program; **John Ladd**, chairman of the Program in Biomedical Ethics; **Barbara Lewalski**, chairman of the Program in Renaissance Studies; and **Barton St. Armand**, acting chairman of the American Civilization Program

□ Brown's Program in Medicine continues to bring in impressive grants. The University has been commissioned by the federal government to conduct a \$3-million, three-year study of hospices — the private, largely volunteer, centers where terminally ill patients and their

families can receive both medical care and counseling. The hospice movement began in England in the 1940s but has taken hold in this country only recently. Since the first hospice was founded in New Haven eight years ago, though, more than 600 have been established. Brown's study will determine whether these centers should be made an official, permanent part of the nation's health program, with status for insurance and funding from Medicare and other federal, state, and local programs. The project will be administered by **Vince Mor**, a sociologist from the Hebrew Rehabilitation Center in Boston, who became an assistant professor of community health on the Brown faculty in April. Dr. **David S. Greer**, associate dean of medicine, will be the principal investigator, leading a part-time team of a dozen University medical faculty who will work closely with hospices in Boston, Minneapolis, and San Francisco as well as centers in Providence. Brown won the grant in competition with several other institutions; the award marks the University's first entry into a national health-care evaluation.

□ In an area closely related to the hospice study, Dr. **Richard Goldberg** will use a three-year, quarter-million-dollar grant from the National Cancer Institute to research counseling for terminally ill patients and their families. Dr. Goldberg, an associate director of the department of psychiatry at Rhode Island Hospital and an assistant professor at Brown, will explore useful therapies for families in need of extra emotional support.

□ The Center for Cognitive Science at Brown is the recipient of a three-year \$500,000 grant for postdoctoral research from the Alfred P. Sloan Foundation. This interdisciplinary group (psychology, linguistics, and computer science) studies the nature and process of human and machine intelligence systems. Founded in 1977, the center is under the guidance of **Richard B. Millward**, director of the center and professor of psychology, and **Leon M. Cooper**, the Thomas J. Watson, Sr. Professor of Science. The grant will provide for twelve one-year fellowships.

ace with the arguments, applauding and laughing with the speakers.

Morris opened by avowing that neither creationism nor evolution can be proven or disproven scientifically, because neither can be properly tested or observed. Both theories are paradigms, representing world views, and are only believable as dogma. But this argument was not a set-up leading to a Biblical explanation. Prior to the debate, both speakers had agreed that all religious writings, even Genesis, were to be left out of the debate. Instead, while observable data can be made to fit both models, Morris continued, one model—creationism—would be shown to fit the data better. This approach of relying upon scientific evidence is the way creationists believe their theory should be presented in public education, alongside the theory of evolution. Although the recent court trial in California in March, referred to as *Scopes II*, did not bring the teaching of creationism into California's public schools, the Arkansas legislature has passed the first state law requiring that both creationism and evolution be taught.

Morris concentrated his argument on fossil records: While they may record some changes within species, there is no "continuum in nature," no record of species constantly transforming into more complex kinds. The gaps in the transition between organisms, he said, are "even wider than they were in Darwin's day." The audience cheered when Morris simplified this line of argument with, "If we found animals 10 percent dog and 90 percent cat, it would be hard to explain that in any other way than by evolution. But we don't find that; cats don't turn into dogs."

Some other points Morris made were: Primitive animals are deeper in rock layers, and more complex animals are higher in the strata because the more primitive animals could not seek higher ground during the flood; the second law of thermodynamics, stating that all processes move irreversibly toward randomness, conflicts with the evolutionary theory, which says that things move up in complexity; the evolutionists' method of radioactive dating of rocks and bones is not a sure and accurate method ("It has given readings of 3,000,000 years for lava flows not yet 200 years old and 10,000 years for live hardwood trees"); dinosaur and humanlike footprints have been dis-

covered together in Texas. Morris concluded, "Because one can lift the scientific evidence in terms of the two models, both models need to be presented . . . not only once every day like this in an auditorium but every day in a classroom."

Miller had listened to tapes of Morris's similar debates and came to Meehan prepared to challenge every one of Morris's arguments. In his opening statement Miller refuted the idea that evolution could not be disproven. He said that scientists have had many opportunities to disprove evolution over the past decades, and in every case the theory has survived virtually intact, making it one of the strongest concepts in modern science. If Morris is right about the gaps in the fossil record disqualifying the theory of evolution, Miller contended, then all animals that ever lived should have been present at the time of creation. However, older rocks have fewer animals. "Special creation would have to say the fossil record is upside down," Miller said, receiving a round of applause.

He went on to acknowledge the fact that there are indeed many gaps in the fossil record, but that Morris's contention that there are *no* examples of transitions is not accurate. Miller presented four documented examples of transitions: the evolution of mammals from reptiles, the evolution of the modern horse, the elephant, and the nautilus snail. Referring to Morris's use of the second law of thermodynamics, Miller said, "My friends, Dr. Morris is fibbing and I believe Dr. Morris knows it." Miller explained that according to the law, the entropy in a system may increase, stay constant, or decrease, which supports the evolutionary theory.

As to Morris's accusations of inaccuracies in the evolutionists' dating process, Miller said that Morris was citing results from years prior to the perfection of the techniques. If the universe is only 10,000 years old, as creationists suggest, Miller said, "light from stars millions of light years away would never have time to reach the earth. According to the creationist theory, the only way it could happen is if the creator arranged the universe in such a way as to fool us . . . into thinking events occurred that never took place." Miller said the creationists are ignoring the evidence of radioactive decay of chemical half-lives if they say the only way to define the age of the earth is by

divine revelation. Miller brought along a slide of the contemporaneous footprints of man and dinosaur and explained it as "a hoax."

"We must deal with special creation the way Copernicus dealt with the notion that the sun orbits the earth," Miller said, calling evolution a "model of simplicity and truth."

Morris, who has been advocating creationism in university debates across the country, received his Ph.D. in hydraulic engineering at the University of Minnesota in 1950. He served as the acting dean of engineering at the University of Southwestern Louisiana in 1957 and chaired the department of civil engineering at Virginia Polytechnic Institute until 1970. He has written more than twenty volumes on the catastrophist geological theory.

Miller received his Ph.D. from the University of Colorado in 1974. He was assistant professor and director of the electron microscope laboratory at the Harvard department of biology before coming to Brown last September. Concentrating his research in cell biology, Miller has published nearly twenty articles in scientific journals. — *Judy Backman*

SPORTS

By Rob Feinstein

BASEBALL: New coach and new enthusiasm

Who was the first rookie pitcher to ever start an All-Star game in the major leagues? That question probably used to stump a lot of trivia experts around College Hill. But recently, the answer has become more widely known at Brown because the man who turned the trick is now the coach of the baseball team: Dave Stenhouse.

In late July of 1962, the then twenty-eight-year-old Stenhouse went to the mound for the American League team in Chicago's Wrigley Field. He had won ten games for the last-place Washington Senators and was billed as a "rookie sensation" by the *Washington Post*.

Stenhouse was not scheduled to get the starting nod that day, but the man who was supposed to pitch came up with a tender throwing elbow. All-Star (New York Yankees) Manager Ralph Houk (now the skipper of the Boston

Red Sox) survived the rest of his cast and picked the Rhode Island native.

The rookie responded well, giving up one run in two innings, and missed being the pitcher of record on the winning side by one play at the plate.

I was really surprised and thrilled to be selected," Stenhouse recalls. "The National League had a very potent lineup that year. I faced Dick Groat, Roberto Clemente, Willie Mays, Orlando Cepeda, Tommy Davis."

The thrills gained from coaching baseball at the college level are far from new to Brown's newest head coach. He coached a very successful Rhode Island College squad for the past twelve seasons, and led them to 106 wins against 60 losses during the last five years there. During that span, his teams appeared in six consecutive post-season tournaments and accumulated five 20-win seasons.

Stenhouse hopes that there will be many more thrills to be had in his term at Brown's helm. The Bruins have won but 29 games over the past three seasons, and the new head man has a tall task in attempting to rebuild a winning program. But the potential is there, says Stenhouse, and he is determined to turn the squad into a winner.

A believer in fundamentals, Stenhouse says that he stresses to his players, "This is serious. Sure, we want to have fun. But you can't have fun if you're not playing the game properly. It just becomes depressing after a while."

Things were a bit depressing for Stenhouse's first Brown team this spring when it began its spring schedule with a trip south. The Bruins ran into some very tough competition, and some of the teams had already played as many games as Brown will all year. The early season rustiness showed in a big way, with the team dropping all seven games on the swing as well as their first three Eastern League games upon returning north. Since then, however, the Bruins have won five out of nine games. The enthusiasm on the squad has taken a tremendous jump.

There's been tremendous improvement lately," says the coach. "We played a good Navy team (undefeated in Eastern League play before meeting the Bruins) as well as any team we faced down south. They were tortured to come out with a split with us. Our defense was a better baseball team."

Stenhouse was extremely trust-

New coaches Dave Stenhouse

trated with the team's early sluggishness, which he attributes to a lack of "raw baseball talent" on the roster. The coach bemoans the fact that many of his players only play baseball in the spring, foregoing competition in summer leagues.

"You have to play, you have to play," Stenhouse repeats several times, harping on his point that baseball players must be bred year-round, not just one season a year.

MEN'S BASKETBALL:

Joe Mullaney resigns, Mike Cingiser signs

Within the space of eighteen days in April, the men's basketball team lost one coach and gained another. Joe Mullaney, head man at Brown for the past three seasons, unexpectedly and suddenly left Brown to return to Providence College, where he succeeds Gary Walters, who resigned. Mullaney's successor will be Mike Cingiser '62, who was a three-time All-Ivy selection and Brown's second all-time leading scorer in his playing days.

The naming of Cingiser was a surprise. A selection committee headed by Athletic Director John Parry had considered seventy-nine applicants for the position, narrowing the field down to nine for interviewing.

Many felt that a present Ivy League assistant would get the nod, but instead the committee and Parry opted for Cingiser, who has not coached basket-

ball for the last two years. Prior to the Cingiser was an assistant at Hofstra and a very successful high school coach on Long Island, New York.

Cingiser seems to fit the mold set by Parry for his new coach. He had to know and respect the ideals of Ivy League basketball, Parry had said. For that, Cingiser is the man.

At the news conference to announce his signing, Cingiser outlined the style of play he would like to see his new Bruins play. Cingiser hopes to get the Bruins running and gunning, something the squad was never called upon to do during the Mullaney years.

Cingiser also rejected a defensive approach to basketball, saying that "trying to stop them from doing what they want to do, instead of trying to do what you want to do, is like trying to be a javelin catcher." This also departs from the Mullaney teams, which were noted for their defensive talents the last three years.

Perhaps the biggest shortcoming of the new coach's arrival is not Cingiser's fault at all — that is this year's recruiting class. This was to be a very important freshman class to the Brown basketball program. If the recruiting effort faltered because of the switch — coming at the time when most recruits are choosing college — then Cingiser's program for bringing Brown basketball to prominence may fall behind schedule.

Mullaney leaves Brown to return to the scene of his greatest success — and it was obvious at the PC press conference called to announce Walters' resignation and Mullaney's appointment

and Mike Cingiser

at Mullaney had been thinking for some time about leaving Brown. He had begun to feel, he said, that Brown might not be the place for him. This past year had been particularly frustrating, ending with a 9-17 record, and the difficulty of recruiting for an Ivy League school was also a factor.

Mullaney served at Brown's helm for three seasons, compiling an overall record of 29 wins and 49 losses. However, the team did show steady improvement during his first two years, after having suffered through a 4-22 campaign the year before he arrived.

Tough defense was the trademark of Mullaney teams at Brown. Often Brown could outscore more talented teams from the field, but would lose games at the free-throw line. The coach always bemoaned the lack of a talented big man who could have helped the team at both ends of the floor.

The trip from College Hill to Providence College's Smith Hill will be a homecoming for Mullaney, who coached the Friars with great success in the 1960s. His teams compiled nine 10-win seasons during that time, including two championships in the National Invitational Tournament.

MEN'S CREW:

Rebuilding with capital 'R'

"It's a rebuilding year, and that's with a capital R." That's how head coach Vic Michalson sums up the year's prospects for the men's crew.

"We graduated the guts out of our varsity team," says Michalson. "We lost five rowers out of each boat."

The inexperience has showed in the crews' first races of the year, losing efforts to fine crews of Boston University and Harvard after a spring recess trip to San Diego to compete in a large regatta.

The problem, according to Michalson, is the amount of "time, mileage, and development" that the young crew must get under its belt before it can be truly competitive.

But the coach is not writing off the season at all. "We're looking forward to the latter part of the year," he says. "We've had young crews before, and they've done well. Only a couple of times in the twenty years I've been here have we not kept improving right along all season."

That twenty-year career will come

to an end at the close of this season when Michalson retires. The campus will miss him, especially his famous habit of recruiting young men for the crew while they are on line for registration during their freshman orientation. For years, it's been one of the most successful recruiting methods on campus. And it made a name for Brown as a perennial national contender in rowing.

One year's income: \$21,648,961

Federal Funds at Brown

A special report
compiled by
Mark Nickel,
medical and
science writer
in Brown's
News Bureau

Where in Washington it comes from . . .

Health and Human Services: \$8,572,906

National Science Foundation: \$7,124,989

Department of Energy: \$1,891,107

Department of Defense: \$1,472,210

NASA: \$911,618

Department of Education: \$679,531

Other: \$511,192

Arts and Humanities: \$485,408

Nothing cuts money down to size like federal agencies caught in congressional budget cutting. When millions and billions are chopped here and added there, a hundred thousand dollars sounds like small change. Because President Reagan's budget cuts are still under debate at this writing, it's difficult to know what might happen to smaller amounts — say \$10,000 for a symposium on Gustave Flaubert at Brown. But in order to get at least a rough idea of the University's stake in the process, these pages lay out in chart form where Brown's federal money comes from and where it goes once it gets here.

There are several important qualifications to keep

in mind while studying the figures:

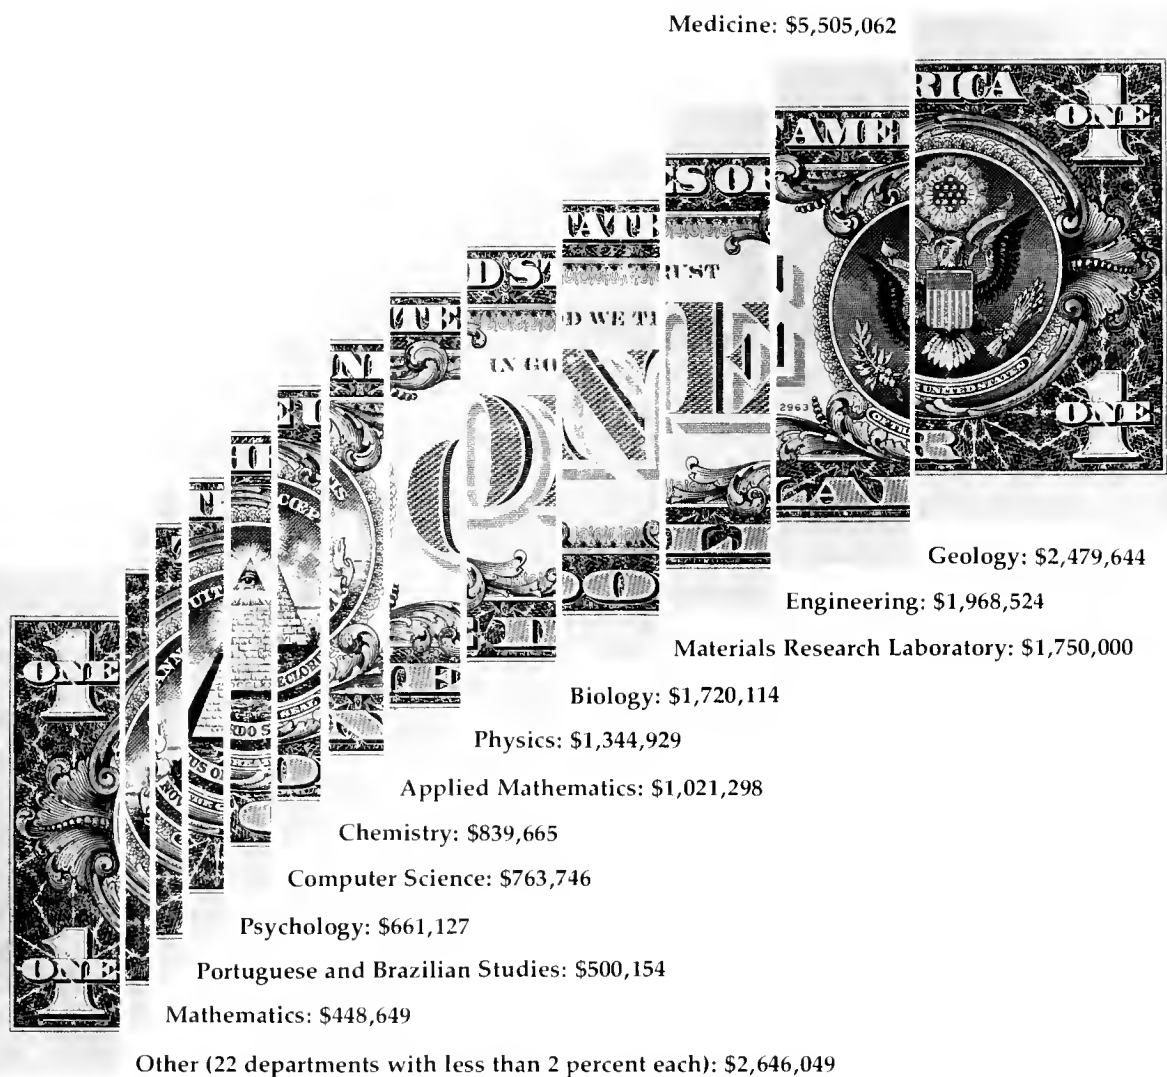

1) The amounts represent federal grants and contracts reported by Brown's Office of Research Administration during the twelve months of April 1980 through March 1981.

2) Budget cuts at federal agencies have no direct relationship to Brown's grant income. Brown's volume of research could fall or even rise despite cuts.

3) Federal aid to students is not part of these figures, nor is money Brown receives from federally funded state agencies.

4) Although most federal grants are reported in one-year increments, some of the grants included in these figures run for two or three years.

Where it goes at Brown

The Materials Research Laboratory includes fifty-five individual grants to five Brown departments.

Includes HEW grants made before July 1, 1980. Office of Naval Research, Air Force Office of Scientific Research, Army, Army Research Office, Naval Research Laboratory.

⁴ Created July 1, 1980.

⁵ Each contributing less than 1 percent of Brown's federal grant money: U.S. International Communications Agency, National Bureau of Statistics, U.S. Geological Survey, Department of Transportation, National Park Service, Department of the Interior.

The little black box crouching in the corner of the living room may be the source of occasional irritation to most people — witless situation comedies, depressing 6 o'clock reports, meretricious commercials, even poor reception. But to many politicians, that black box and the rest of the fourth estate is the source of great angst, considerable concern, and possibly the means for political survival.

Mass Media and the Elections: Who Dominates American Politics?" was the question of the day at the second annual public affairs conference sponsored by the

Providence Journal-Bulletin and Brown last March. Participating in the conference were journalists Sander Vanocur, ABC News diplomatic correspondent; Jack Germond, Washington Star columnist; Hubert Feichtlbauer, editor of the Austrian newspaper Die Furche; and Linda Wertheimer, National Public Radio political correspondent; and politicians Walter F. Mondale, former Vice President; and John Anderson, presidential candidate. Rounding out the list of speakers were James David Barber, Duke University political scientist;

Richard Scammon, public opinion expert and NBC News elections consultant; and John Terrence Dolan, chairman of the National Conservative Political Action Committee.

While no one wanted to claim responsibility for dominating American politics, several of the speakers singled out the media — and particularly television — as the ruling force. How do we spell relief from the influence of the almighty tube? Vanocur, in his keynote address, suggests the s-m-o-k-t-i-l-l-e-d r-o-o-m, among other things.

The New Holy Trinity of American Politics

(Television, pollsters, and political consultants)

By Sander Vanocur

As your subject is the impact of the media on politics and elections, allow me, at the outset, to establish my credentials. I stand before you as a former political reporter, defrocked of my vestments by Roone Arledge and transformed into something called a diplomatic correspondent.

Covering more than twenty years of American politics, including six presidential campaigns, is a sensation somewhat akin to being asked to watch *Naughty Marietta* six times: one knows exactly where and when Nelson Eddy and Jeanette McDonald will break into song.

I consistently had the feeling during the last presidential campaign — from the Democratic caucuses in Florida in October 1979 right through to election night last November — that I had become a piece of redundant machinery, already amortized six times over, with no role approaching that which I used to enjoy — and I do emphasize I used to enjoy.

In my new capacity, I will no longer feel like an electronic Luddite, tempted to smash television — my daily bread — pollsters — and political consultants — the new Holy Trinity of American politics,

who have combined to make me and others like me an obsolete piece of human machinery.

As I said, I have been a national political reporter for just over twenty years. Being a political reporter has never been easy work. For years, my definition of tragedy for a political reporter has been the recurring nightmare of checking into a Quality Court Motel in the middle of winter to cover the Indiana primary. The motel is one half-hour's distance from downtown Indianapolis and I arrive two hours after the restaurant has closed and five minutes after the bar has served the last drink, feeling terribly depressed and modestly horny, only to find that I don't have a quarter for a vibrator bed.

But despite that recurring nightmare, I must say that it used to be fun. You used to seek out local elected officials, local journalists, local labor leaders, talkative taxi drivers, and the town drunk, all of whom enabled you to decide, after you figured out who were the biggest liars, what it was that you wished to impart to your viewers about the pulse of the voter.

Often, you felt like Groucho Marx as he took Harpo's pulse and turned to

the audience and said: "Either this man is dead or my watch has stopped." But even though it was inexact, it was no bad system.

But it's gone now, dead as the dodo, swept away by political reform and its attendant bookkeepers and the new Holy Trinity: television, pollsters and political consultants.

What has replaced the political system that I and those of you as old as I am can remember? The answer: The media has replaced it. The new political sovereignty in this country is the media.

By media, I mean the press, most its electronic element, the pollsters, and the image makers, all in bed together, without much thought as to whether what we are doing is more than vaguely incestuous. I think it is more than vaguely.

The political process, as I used to understand it, did more than supply jobs in our larger centers of population. It also provided information, not just about political issues, but also about the mere elements of urban survival — how to deal with a summons, how to get a paving permit for your driveway, how

to deal with an unfair tax assessment on your property, or how to get your dumb brother-in-law a job in city hall running an elevator.

But then, something happened to our cities. About 1954, the only important piece of domestic legislation of the Eisenhower Administration (apart from the creation of the Department of Health, Education and Welfare) was passed. It was called the Defense Interstate Highway Act. (Defense was attached to its name because then, as now, anything with defense attached to it was certain of passage by the Congress.)

It coincided with something else, the explosion of the sales of television sets and television advertising — especially one show called the Dinah Shore Show, sponsored by Chevrolet with the slogan: "See the USA in Your Chevrolet."

About this time, perhaps even a bit before, America began to spread out from its cities. The cities began either to dissolve or merge into the suburbs. (The process had merely begun. It had not yet run its course.)

At the same time, there was a phenomenon (it actually started in the fall of 1956) called the Huntley-Brinkley Report. The two men resisted, at first, the losing for the show suggested by its producer, Reuben Frank: "Goodnight, David. Goodnight, Chet."

And whether they knew it or not at the time, within the short span of a few years, they had become electronic national precinct captains, who were not only supplying what we believed to be necessary information to us — one of the chief functions of organized political parties — but they were also putting a benediction on this information as they passed it to us. A benediction brought to an even higher lay ecclesiastical function by their successor in the ratings war, Walter Cronkite, who came very close to claiming infallibility as he intoned every night at the close of his broadcast: "And that's the way it is . . ." Ed Murrow, when he used to sign off, at least wished us "Goodnight and good luck." For nineteen years, Walter's signoff was devoid of any sense of redemption. It was simply that's the way it is. Tough luck if it's not good luck, an electronic Martin Luther, nailing each night ninety-five theses to our consciousness.

It would be nice to say now that those of us who were involved in the

process in the late '50s or early '60s understood the power that we had assumed. We did not.

John F. Kennedy, who owed his election to television, specifically to the first debate with Richard Nixon, came to this understanding of the power of the new benediction function of television news somewhat belatedly. Well into his first year in office, he still thought that *Time* magazine was the most influential force on the minds of Americans. But he soon changed his mind.

By 1964 — and remember that this followed the enormous impact that television had made on the minds of Americans by its coverage of the Kennedy assassination — our power had come to be recognized by the political parties and their leaders. Recall the unrestrained fury invoked by former President Eisenhower at the Republican convention in San Francisco in 1964 when he attacked us, or what happened to us later in the summer at the Democratic convention in Atlantic City.

Lyndon Johnson had a galloping case of paranoia about that convention. He was convinced that Robert Kennedy was going to step in at the last moment to steal the nomination from him.

And one of the devices which he thought would be used to this end was the fight over the seating of the Mississippi Freedom Democratic Party. Johnson used the FBI to spy on members of that delegation. When he saw how much of that struggle over the seating was being shown on television, he tried to reach his good friend, my boss, Robert Kintner, president of NBC. He could not reach Kintner by phone; but he did reach Robert Sarnoff, the chairman of NBC. And, Lyndon Johnson, the man who will go down in history as

having done more for the advancement of the black people in this country than any president since Abraham Lincoln, but fearful of the power of television, said to Sarnoff: "Get those niggers off my television set."

Johnson, in his own brilliant, raw, crude, and intuitive way, was probably the first president to understand this new political sovereignty of television. He was ultimately convinced that it finished him politically over the issue of Vietnam — though it is my own personal view that it was not television's coverage of the Vietnam war that hastened its end as it was the mounting opposition that was occasioned by drafting white middle class youth to fight it.

But LBJ was convinced that he was through politically when Walter Cronkite came out against the war following the Tet offensive in the early winter of 1968.

The Democratic convention in Chicago later that year — though it seems so mainly in retrospect — was a crossover moment for television in its road to becoming the new political sovereignty. The students in Grant Park shouted: "The whole world is watching." I don't know if the whole world was watching, but America was.

And what it saw of us, of our performance, it did not like. It may have been right, but for the wrong reasons. We had crossed over during that convention — perhaps we had been pushed — over that line that divides observers from participants in the political process. We did not wish to cross that line, or be pushed across it — but we crossed it, nevertheless, and having crossed over I do not think that our role in

'At the Democratic convention in 1968, TV crossed over the line that divides observers from participants in the political process'

American politics has ever been the same since.

It has not been the same since because what America saw on its television screens prompted not just anger at what our young were doing, but it prompted anger against television, and curiously hardly any anger over what the Chicago police department and Lyndon Johnson's agents were doing outside and inside the convention hall. It also created a propitious atmosphere for political reform within the Democratic Party, specifically against the manner by which convention delegates were picked and how that party's conventions would be run in the future.

The Democratic party convention in Chicago did more than push television across that line that divides the detached spectator from the participant. It created the McGovern reform commission to change the rules that guided the selection of delegates to the party's convention. Without arguing the merits of the reforms themselves or the McGovern candidacy itself, there was an historical conjunction here that forever changed the nature of American politics — and in a sense the coverage of politics by the press.

Television by 1972 had become — without question — the predominant means by which the American people received their information. The McGovern candidacy was designed to maximize that condition. It was designed to allow a candidate, running on an emotional issue — the war — to use the new party rules plus the increasing power and willingness of the press, but especially television, to decide what was winning and what was losing in political terms — to leap into an early lead in the caucuses and primaries and never lose that lead and at the same time to sweep into oblivion candidates who were more broadly based.

The single most decisive moment in the 1972 campaign came on a Saturday evening before the New Hampshire primary: Ed Muskie, standing on a flatbed truck in the snow before the offices of the *Manchester Union Leader*, defending his wife from attacks by the paper's publisher, William Loeb. Muskie, overcome by emotion, was perceived by millions of Americans to have broken down. I do not know — and I have seen the film several times since — if there were tears on Muskie's face or melting snow. It did not matter. He was perceived to be crying and from that

moment on he was finished as a presidential candidate. McGovern, who had finished third in Iowa, second in New Hampshire, fourth in Florida, was first narrowly in Wisconsin (just barely beating George Wallace), and from that moment on, this moment, plus shrewd organizing in non-primary states, insured him the nomination that the press had already bestowed upon him.

But he just barely made getting the nomination. Why? Because the press, printed and electronic, decided about May that it was getting bored with McGovern. It was not a collective decision that the press took. Unlike what Spiro Agnew charged us with, we are not conspiratorial. We can hardly agree in the press on a place for lunch. But in a curiously subjective way, we appear to have decided that since McGovern should never have been the nominee anyway — and since much of the press had dismissed his early chances — we could now almost make a self-fulfilling prophecy come true by almost making sure that his candidacy would not come about, or that if it did come about, it would be a flawed one — which eventually it was, what with his welfare reform plan and his bungling of the Eagleton affair.

The Carter campaign of 1976 was skillfully designed to avoid the pitfalls of the McGovern campaign. Again, using the reform rules and shrewdly playing on the desire of the press to make the campaign resemble a horse race, the Carter campaign knew that it had to win the Iowa caucuses so that the press would establish him in the role of frontrunner there and nail it down in New Hampshire.

In December, Carter won in a poll of candidates at a Democratic dinner. In the days before the caucuses, Carter's media adviser, Jerry Rafshoon, bought the five-minute sections of the "Today Show," usually devoted to the local news, to show five-minute biographies of Carter, and he took out ads in local newspapers to draw attention to the commercials. The net cost of this effort was only \$7,600. The net effect was to insure that Carter would go into New Hampshire the front runner, a position he never lost until the convention in New York that summer, though at times his hold on that role became precarious. (The reason for this was that by spring we had become as bored with Carter as we had of McGovern and were becoming fascinated with Jerry Brown. There

was nothing personal in all this. We were, we are, not a very advanced form of carnivore and we need fresh meat to feed upon on a daily basis or we soon grow weary of our diet.)

If the candidacy of Jimmy Carter in 1976 was a classic case of one candidate understanding the new and commanding role of the media in the political process — indeed, how the media had become the political process — the Edward Kennedy campaign of 1980 seems to have been a classic case of a candidate beginning his campaign with a bad misunderstanding of the role that the media had come to play in the political process.

Having covered his brothers' presidential campaigns, it seemed clear to me from the start that Kennedy and his advisers — at least those that he listened to — did not understand that in terms of political change 1980 was 200 years in time from 1960, and from 1968 it was 12 years.

I think his first mistake was in believing that the polls of August would be the polls of December. His second mistake was the Roger Mudd interview on CBS, which underscored his third mistake, which was not to have his own pollster in the summer to advise him how Chappaquidick would affect his campaign and the complex effect of the event on voters' perceptions of Edward Kennedy: namely that he would be measured against the memories of his brothers and found wanting.

His fourth and most important mistake was in not hiring immediately a media consultant who would be in a position to seek to influence the public perception of his candidacy. His fifth mistake was to underestimate what a good politician Jimmy Carter was, perhaps not in the politics of governing but in the politics of politics, and how much Carter and his aides understood the new sovereignty of the mass media — better, in fact, than anyone else who had gone before them.

But those who live by the new sovereignty, the new Holy Trinity, can also die by it, and that is what happened to Jimmy Carter. He stayed in the White House, riding the resurgent nationalism of this nation, brought about by the seizure of the hostages in Iran and the Soviet invasion of Afghanistan, using television from time to time, only emerging from his self-imposed campaign exile in May, when the hostage

issue began to turn on him, focusing attention on his political Achilles heel: his unrivaled capacity to produce in the American people at home and abroad a sense of impotency.

But what worked against Kennedy would not work against Reagan. I observed on the third night of the Democratic convention at Madison Square Garden that it would be Carter's tactic to seek to portray Reagan as a cross between Ebenezer Scrooge and the Mad Bomber. That is exactly what he did, especially in the initial television advertising in September. There was just one problem. Reagan refused, by character and by instinct, to play the role. And so, very quickly, a change occurred in the perceptions of many Americans about Jimmy Carter. Instead of thinking that he was a nice man who was not too bright, they finally saw him for what he had been all along: a bright man who was not too nice.

In an odd way there really wasn't a presidential campaign last fall, apart from the television commercials that were aired. It was almost as if the campaign was the lull before the lull. The debates became the campaign itself. Everything seemed to stand in place until the one debate between Jimmy Carter and Ronald Reagan in Cleveland the week before election day.

A personal note of bias about presidential debates: I am against them. They are not debates. They are media events, deeply believed in by practitioners of what I call boutique politics, as being contributory to the political process, of satisfying the public's quote right to know unquote. I find them something else, and following the 1976 debates between Ford and Carter I observed on the pages of the *Washington Post* that following the election those who cherished what was left of the American political process should go into federal court seeking an injunction that would forever bar two consenting candidates from performing unnatural acts in public.

In an age where media is king, the debates become the campaign itself. It is as if everything else — the campaigning, the commercials (and I have absolutely no bias against political commercials whether they come in thirty-second, one-minute, five-minute, or thirty-minute forms) seems to be on hold, off in some kind of limbo, secondary to the debate, as in the last cam-

'The campaign seemed to stand in place until the one debate between Carter and Reagan in Cleveland the week before election day'

paigned or the three between Carter and Ford in 1976. It has all seemed in the past two campaigns to have come down to how each candidate did, or how each candidate looked.

In addition to giving the press something to write about, in addition to giving pollsters something to poll within minutes or hours after the event has concluded, the debates provide a burgeoning cottage industry for academics. In 1976, Joe Lelyveld, who was covering the campaign for the *New York Times*, strictly from the point of view of the media, noted that four researchers in communications at the State University of New York at Buffalo attempted to quantify the Ford-Carter debates with what they called "an analysis of 4,458 specific non-verbal behaviors and 628 verbal references in the first and second debates."

I quote from the Lelyveld article: "After 500 hours of work on the subject, they have now reported that Mr. Carter looked at the camera 85 percent of the time in the second debate compared to only 26 percent in the first, and that in the second debate he also reduced by about one-half his use of statistics or specific examples. If he won the debate, the researchers suggested, it was on 'style' and 'attitude.'"

"The researchers reported that Mr. Ford increased his quantum of smiles from a meager eight 'slight smiles' in the first debate to forty-eight slight smiles in the second, plus four broad ones. But he was still clearly out-smiled by Mr. Carter, who managed, the researchers said, ninety-five slight smiles in the second debate, and fourteen broad ones."

I have been speaking mainly about what has happened to the political process in terms of presidential elections, how the Holy Trinity has come very close to being the political system itself. You may counter argue with me that there is still a national political system once the campaign is finished, a political system that thrives in the Congress and the Executive branch. But I wonder if even that system has survived the domination of television, or if it is a system as good as once I found it.

When I first came to Washington at the end of 1960, power, or political clout, seemed to me to depend on a certain kind of structured anonymity. If you had power in the Congress or the Executive branch you tried never to flaunt it. Indeed, the powerful people I observed in Washington in those days seemed to go to rather elaborate lengths to try and hide it.

I remember sitting in the entry hall of the White House in late 1961 and observing a man named Albert Thomas, of Texas, going to see President Kennedy. At dinner that night, I asked Kennedy's congressional liaison aide Larry O'Brien about the visit. O'Brien said that its purpose was for Thomas to assure the President that if a recession threatened, he, Thomas, could arrange for three or four billion dollars — which was a lot of money in those days — to be pumped into the economy with hardly anyone noticing it. How would he do it? Simple. He was head of something that few reporters paid much attention to — certainly television did not: he was chairman of the House Appropriations Subcommittee on Independent Agencies.

His position — plus his relative anonymity among members of the press in those days — seemed to suggest to me a certain kind of power: a kind of power that was solidly based on the ability to dispense monies and solidly based in the kind of political anonymity that precluded a lot of people from asking about the nature of that power, how it was used, and for what purpose.

But during the '60s, and much more so in the '70s, I began to notice a fundamental change in the way politicians in Washington and outside it used television, or though they didn't know it, were used by it.

Politicians used to use television, whether it was a presidential speech or an appearance on "Meet the Press," "Face the Nation," "Issues & Answers," or the "Today Show" (which was, in some ways, television's most potent political force in the '60s) to advance a program, a piece of legislation, or create a mood of public opinion for either one, or conversely, as a means of opposing it.

Going on television didn't used to be an isolated act in the political process. It was accompanied by other political gestures such as jawboning, appeals to self-interest, appeals to fear.

Then towards the end of the '60s I began to notice a slight shift which now has become much more magnified. Politicians, I observed, seemed to go more and more on television, not so much to push this or that piece of legislation, realizing that this was but one part of the political jigsaw puzzle they were trying to put together. They seemed more and more to behave as if the going on television was an end in itself — that somehow if you went on television that would change things — which, of course, is not the case at all.

And in political campaigns, politicians, including presidential candidates, would perform any number and manner of duties to get on evening news shows — national and local. They said nothing memorable, nothing worth quoting. But they would arrange their schedules, not to discuss the issues or report to voters, but merely to get on the evening news — to get exposure.

It is a matter that what they gave us, or perhaps what they were forced to give us, is in most cases indecent publicity. It is the myth spread that what is wrong with the political process was exacerbated by television.

Admittedly, it is, in a memorable

SO OTHER SPEAKERS SAID:

I am well aware that I am considered a creation of the media. That will come as a surprise to my father . . .
John Anderson, *former Independent candidate for President*

We've invented something called the great campaign stress test. We take these candidates, follow them from Ramada Inn to Ramada Inn, feed them nothing but creamed chicken and peas, record their every word of wisdom — you put anybody in that kind of situation and sooner or later, they're going to say something stupid.

James David Barber, *Duke University, author of The Pulse of Politics: Electing Presidents in the Media Age*

I doubt that any candidate could move through a general election campaign — with its tight schedule and intimate relationship with traveling reporters — with the constant eye of television on a candidate —

and not dissemble. The process at that point is too tense, and the coverage too intense, to keep up any kind of a show.

Linda Wertheimer, *chief political correspondent, National Public Radio*

One of the signs of desperation of a politician is a call for debate. That's the equivalent of the long bomb. I found that the best way to slip in and out of town unnoticed — except by the Secret Service — was to deliver a speech on a major issue.

Former Vice President Walter Mondale

The public opinion poll is the last refuge of the common man.

Richard Scammon, *director of the Elections Research Center, Washington.*

They can put us out of business by eliminating the election laws that make our existence necessary.

Terry Dolan, *chairman of the National Conservative Political Action Committee*

speech in Los Angeles in the early part of the 1952 campaign, said, "Let's talk sense to the American people. Let's tell them there are no gains without pains."

I am not sure that this is any longer possible in an age when the media has become the political process. It may be possible in print — though I have my doubts, because print people have to write for an audience that is terribly conditioned by what it sees on television news programs.

And television news programs are, more often than we ever would care to admit it, conditioned to go for the dramatic, the visual, the buzz words, at the expense of seasoned political discourse and activity.

Somehow — and I do not know how it can be done — I think that we have to get television extracted from this present dominance of the political process, to get the political process back — and nowhere more so than in the case of the presidential nominating process — to something resembling, if I may be permitted to utter the phrase in this age of political reform, the smoke-filled room.

Television will not do this itself. It cannot be asked to do it. So I suppose that we will have to depend on the two

major political parties, or other parties that come into the process, to find some way to revise their ways of doing business, so as to turn the process away from what it is now — a virtual sixteen to eighteen months of media events that are costly, not just to the candidates, not just to the networks, but to the political process itself, or what's left of it.

If something is not done soon I think the political process will continue to deteriorate to the point that there will be a revulsion against what it has been transformed into by television; and we who are in television, probably along with the pollsters and the political consultants, will be charged with the ultimate debasement, since we have become, not willingly, but in fact, the political process itself. We may plead innocence. But that will not work, for to many innocence is the highest crime of all.

If, to anyone here, all this sounds like warmed-over or up-to-date Agnewism, so be it. But remember what Gene McCarthy said when he was asked about Agnew's charges against television in late 1969: "I agree with everything he says; I just deny him his right to say it."

Brown at the Guthrie Theater

Before Elmer Blistein (top) reviewed *Macbeth*, John Lee Beatty showed sketches of his set designs, including his Tony Award-winning set for *Talley's Folly* (right).

Beatty, Blistein & The Bard

by Christine Bowman '72

Brown's Continuing College not only "continued," it migrated in mid-March. Leaving the campus behind, but not the University's academic resources, the continuing education staff of Brown's university relations department joined with local Brown alumni and friends to present an entertaining program of theater events to Brown alumni in the Minneapolis-St. Paul area. They called it "Theater Con-

cepts: Fair is Foul and Vice Versa."

For those readers who may be unfamiliar with Minneapolis, or who know it only as the revered setting of the long-running "Mary Tyler Moore Show," Minneapolis also is the site of a widely respected repertory theater — the Guthrie Theater. It was here that the Brown clan of the region assembled for a program that would include personal insights into the Broadway set-design world, a Shakespearean scholar's view of what *Macbeth* is really all about, a complete backstage tour of the Guthrie

Theater, discounted admission to the matinee performance of *Macbeth*, and a lively cocktail hour that would provide a chance to hobnob with the day's celebrities.

John Lee Beatty '70 had flown out from New York to talk to us about his profession as a theatrical set designer. His outstanding set designs have won him steady employment on Broadway and off, a Tony Award, two Maraham awards, and one Obie since he had left Brown.

Beatty began by sketching a little

background to give us an idea of just what his work involves. He designs about sixteen shows a year, working on perhaps five at a time that are in various phases of development. Generally, he told us, he starts by talking to the show's director and reading the script. As his plans for the set develop, he may show a preliminary sketch or rendering to the director, and after modifications and perhaps rethinking, he presents a final color version. After that comes construction.

With the basics out of the way, Beatty shifted to what seemed for him a more comfortable mode. As he began to show us his drawings of sets, our real education in theater set design got under way. We saw John Lee Beatty the artist and problem solver, the Beatty who later would mention that he had wanted to be a set designer since he was eight years old. Through his drawings, he was able to show how he thinks about each new play, to explain how he solves the aesthetic and practical problems that present themselves, and to point out the trade secrets and rules of thumb of set design that would usually go unnoticed by the casual theatergoer. What he really did was make us "see" sets differently, and in the process, he made them more fun to see.

It soon became clear that with every play Beatty works on there are new challenges and problems requiring new solutions. One frequent challenge, of course, is to make the actors look good, and to help keep the audience's eye on the lead characters. When designing a set for a red-haired leading lady, for instance, Beatty chooses colors that will set her off nicely. If the actress is tiny, he makes the doorways a little shorter, and when his lead performer is huge, he makes the armchairs and tables and everything else a touch larger than usual. To keep attention from drifting away from the actors, he may incorporate converging lines into the set design that keep pointing back to the action on stage — or he may use arches or a circular pattern to enclose and highlight the actors.

Likewise there are many ways to contribute to or destroy the mood a playwright and director hope to establish. Designing a set with a large scale, for instance — high ceilings, grand staircases, and the like — usually reinforces the seriousness of a play. A small set, on the other hand, suits a frivolous comedy.

Sometimes, however, these handy rules of thumb work against the designer. Beatty recalled his problems when working on a comedy that was set in a governor's office in the deep South. His initial sketch for the director showed a carefully rendered scene from a grand old Southern building, and the feeling of the large-scale set was that of the grand old South — nothing comic about it. After discussion with the director, a solution was agreed upon, and Beatty came back with a final drawing of the set which showed the same basic room — but with a difference. He built in a sprinkling of obvious architectural "mistakes," thereby letting his visual jokes and oddities help set the comic mood of the play.

Another challenge that presents itself in many plays is helping the director build up dramatic tension by creating uncomfortable playing areas for the actors to work in. This was the case in *Talley's Folly*, for which he won the Tony Award. Beatty's solution was to kill the downstage center section — the front-and-center spot of the stage where musical comedy stars and romantic heroes and heroines plant themselves when demanding all our attention. Beatty designed the set, which showed a moody, deserted boathouse along the Mississippi River, so that the actors were more or less trapped in odd locations off center. Only at the end of the play, when the two lovers climb into a small boat located at downstage center, is the discomfort and inconvenience that has been sustained throughout the play resolved.

After a very successful off-Broadway run, *Talley's Folly* moved on to Broadway, and Beatty had to redesign his set for a less intimate audience of about 1,200, rather than 200. Beatty's design became bigger and fancier, to accommodate Broadway's expectations. He also made the set shoot out into the audience more, to make it come out and grab people who were necessarily physically remote. Since the new set was much larger and had more distractions than the earlier version, Beatty added curving lines to encircle the players, to keep other aspects of the set from distracting attention from the actors and action.

One of the more outlandish plays Beatty described — in terms of set design, that is — was Jules Feiffer's *Knock, Knock*. Joan of Arc is a key character in

the play, and since she was known to hear voices from time to time, Beatty had to mount speakers inconspicuous all over the set to make it seem as though her voices were following her and emanating from different places.

But that was where the technical problems of *Knock, Knock* only began. As Beatty recounted, with perfect calm, there was one huge climactic gag in the play that included an exploding stove pans dropping from their shelves, actors falling over, and an array of intermediate sight gags that were part of a long chain reaction building to an even bigger laugh. The scene ended with a shoot-out, after which the walls and the attic all caved in.

"The problem for me, of course," Beatty acknowledged modestly, getting a laugh of his own at that point, "was trying to line the tricks up so that no one trick was in front of the other, and the could all be seen by the whole audience." He worked out a complicated system of hinges and guide tracks that made the set reconstructible after each performance's demolition, and the system prevented any falling pieces from interfering with the others, or from hurting anyone.

Beatty showed us designs for other plays (*Ain't Misbehavin'*, *The 5th of July*, *Misalliance*, *Biography*, *Ashes*, and a new Neil Simon play called *Fools*, among them), always leaving his audience with new insights into what makes a play work. Beatty's personal style, which was in turn fun, quiet, comic, gentle, and thoughtful, left us feeling good about the serious artistry and talent that lie behind the glitter and artifice of the theater world.

From the visual orientation we shifted to the literary and intellectual approach to drama of Elmer Blistein '42 ('46 A.M., '53 Ph.D.), an eminent Shakespearean scholar and professor of English at Brown. Blistein's assignment was to "prep" us for the performance of *Macbeth* we would be seeing in the afternoon — and, just maybe, to trigger fond memories of our undergraduate days. In the Midwestern town of Minneapolis, Blistein's gentle Rhode Island "r's" were soothing and appealing, and his lecture conveyed a professorial presence full of dignity, humor, knowledge, and a love of words.

Blistein reviewed several interpretations of *Macbeth*, and with a few swif-

Lady Macbeth (Deborah May) chatted with members of the audience (above) after the performance. Earlier, the Brown group had toured backstage.

strokes, succeeded in discrediting all but one — his own. Highlighting the ups and downs of the play, and reading key lines by way of revelation, he built a view of *Macbeth* as essentially a play about people — about the relationship of Macbeth to Lady Macbeth, about the evil and good within Macbeth the man. Blistein explained how Shakespeare made us sympathize with Macbeth, despite his deeds, creating a noble and valiant man who was brought to his own damnation.

By leaving the plot, characters, and nuances of *Macbeth* fresh in our thoughts, Blistein deftly accomplished his task, heightening our sensitivity to the upcoming performance.

The next segment of our day at the theater had us up on our feet and weaving our way through the entrails of the multilayered Guthrie Theater complex. Sheila Livingston, a Brown parent and director of public relations for the Guthrie, led a backstage tour that took us through a good deal of Guthrie history while also giving us glimpses of the current company in preparation for the performance we would be seeing.

After learning a bit about the Guthrie's unique stage, which with seven unequal and asymmetrical sides presents some interesting challenges for set designers, we went behind the scenes to the cutting room where the Guthrie's costumes are designed and

made. We toured the dressing rooms (complete with wigs and make-up lights), a wardrobe storage area, a prop closet, and the set-building area, seeing ghosts and fragments of performances past all along our way. After the tour, we reconvened over box lunches for our first real social hour — a brief chance to compare notes while munching on an apple for dessert.

Then we got to see the real thing — the live performance. The weird sisters wove their tapestry of eerie prophecy, Macbeth and Lady Macbeth were ruled by their raised ambitions for power, and the daggers dripped with guilt-inducing blood. When Birnam Wood came to Dunsinane Hill, Macbeth lost his life and kingdom in hand-to-hand combat with Macduff.

Minutes after the play's conclusion, we gathered in the Guthrie lobby for a private Brown theater party, with the Guthrie actors, director, and crew as our special guests. Marcella Hance '44, president of the local Brown Club, joined Sheila Livingston and the Brown University staff members as hosts, while Macbeth himself (actor Paul Sheinar) took the opportunity to solicit Elmer Blistein's reactions to his portrayal of Macbeth. Lady Macbeth (actress Deborah May) entertained a steady stream of admirers with theater stories, and Banquo (actor John Hertzler) turned up yet again, looking much healthier than he had as a ghost.

The Continuing College has traveled to other cities with special events for Brown alumni and friends, and it will travel to more. In Minneapolis, this first opportunity to venture back to academic life, without an actual pilgrimage to Brown's Providence campus, was a satisfying, and stimulating, experience.

Christy Bowman, a former assistant editor of the BAM, is now a member of the public relations staff of Northwestern Memorial Hospital, in Chicago.

'Regulation in the Face of Uncertainty'

Nancy Buc and the tampon recall

Nancy L. Buc in her former office at the Food and Drug Administration.

By Debra Shore

Most of the time when one hears the words "government crisis" — which seems to be most of the time — one thinks of Soviet troops prodding Poland's borders, or a coal miners' strike crippling transportation, or an accidental "event" at Three Mile Island. One doesn't think of tampons.

In late September and October, the thirty-five-million American women who use tampons were abruptly frightened by the use of the emerging indications that tampons were implicated in a potentially fatal condition known as toxic shock syndrome. In public health

terms, thirty-five-million scared Americans constitute an epidemic. That this crisis was effectively and speedily resolved is due in significant part to Nancy L. Buc '65, Fellow of the Brown Corporation and, at the time, chief counsel of the U.S. Food and Drug Administration.

Nancy Buc has the kind of ready wit and almost sassy intelligence that can disarm (without injury to either party) many of her most formidable opponents. Procter and Gamble, for instance,

There had been a report last June from the Center for Disease Control in Atlanta about toxic shock syndrome with the suggestion that tampons might

be involved. Tampons are classified as medical devices, Nancy explains, and as such they fall under FDA regulation. In early September, after further study, the Center for Disease Control planned to issue another report stating that tampons were indeed implicated and that 70 percent of the women with reported cases of toxic shock syndrome in the past had used Rely, the tampon produced by Procter and Gamble.

Suddenly, as news of these reports was published in papers and broadcast on television, millions of American women began to worry. Should we continue to use tampons? What will happen if we do? Should we stop using Rely? What will happen if we don't? Is

as a deeply unsettling time, and Nancy Buc knew that she and her colleagues at the FDA and CDC would have to move fast to alleviate the concern and perhaps, if even for a very few, avoid death.

The episode of toxic shock syndrome is a textbook illustration of both a government agency's special charge and the constraints on meeting that charge. The situation is always this: A regulatory agency must make decisions affecting people — consumers and manufacturers alike — before all the information is in. "In September you sit and think, 'Well, this is really very interesting,'" Nancy recalls. "If it's true [that tampons cause or are implicated in the use of toxic shock syndrome], then people are dying. If it's *not* true, you're going to cost Procter and Gamble \$100 million." (I think they took a \$70-million write-off on this.) So you keep asking the scientists, 'If the data say this, what can we do? What should we do?' What do you do given that you don't know everything and that you may not know everything in enough time to have bearing on this decision-making process? We devised a caption that we used a lot which was: *Regulation in the face of uncertainty*. At some point somebody's got to decide and at bottom it comes down to, that's what they pay you for."

Typically, the scientific information is not clear or solid or complete. A number of women who had toxic shock syndrome in the past had used Rely tampons. But some women who had toxic shock syndrome had *not* used Rely tampons — they had used other brands, none — and a small number of men were also reported to have had toxic shock syndrome. Yet, given the evidence, as inconclusive and contradictory as it was, the FDA had to decide what to do about tampons generally and Rely in particular.

Faced with a possible lawsuit from the FDA, Procter and Gamble voluntarily recalled Rely from the market in late September. It was the first such product recall in Procter and Gamble's history. Then, in near round-the-clock negotiations, Nancy and her colleagues drafted a consent agreement with Procter and Gamble setting forth detailed procedures for conducting the recall down to the consumer level and for advertising about the possible dangers of tampon use. "This was in a period of three to four days and that's unheard of,"

Nancy says. She is a fast talker.

"There was some discussion and feeling that tampons should be banned altogether," Nancy says. "The men were far more inclined to do that than the women. Almost no woman was willing to view napkins as a substitute. This issue of what would be a reliable substitute was of much more acute interest to women than to men."

Even today the genesis of toxic shock syndrome remains obscure, but that most American women can use tampons with much diminished fear and with a greater understanding of the potential risks is a tribute to Nancy Buc's savvy and judgment and negotiating skill.

Her history may illuminate. "I thought I'd run for governor of Virginia someday," Nancy says with glib humor. "That turned out not to be the best idea I ever had." Following her graduation from Pembroke with a degree in American Civilization, Nancy worked for a year as a management intern at the U.S. Department of Labor and then enrolled at the University of Virginia Law School. "I went into law because I couldn't imagine myself sitting still long enough to get a Ph.D. in anything," she says. "There were seven women in my law school class, an embattled group. They admitted women to law school *very* reluctantly with every imaginable excuse. This was during the Vietnam War, and most of the men were there because they didn't want to go to war and they said to me, 'What are you doing here?'"

In the face of this overt hostility, Nancy Buc prevailed; it was not in her nature to do otherwise. In 1969 she went to work at the Federal Trade Commission — "partly because I was genuinely interested in what they did," she says, "and partly because it was clear to me I wasn't going to get a job anywhere else." Though in the top half of her law school class, Nancy found that law firms were not interviewing women. "I had a wonderful time at the FTC. I accepted the job one day before the Nader report critical of the FTC came out, and the agency underwent a rebuilding."

After serving as a staff attorney in the Division of Food and Drug Advertising, she became assistant director of the FTC's Bureau of Consumer Protection — the youngest staff member and the first woman to hold such a position.

Only a year after she joined the FTC, Nancy became attorney-adviser to the chairman, Miles W. Kirkpatrick. "I worked on toy cases and a lot of advertising stuff and then a friend in private practice called me up and said, 'Are you staying at the Commission forever or will you at least come talk to us?' So I went to talk and I figured it was time to go."

She joined the firm of Weil, Gotshal and Manges in New York City, spent five years there doing largely federal administrative work, and became a partner. In January 1978 Nancy moved to the District of Columbia to open a Washington office for her firm. "It was exciting, scary," she says. "We went from three to nine people in that two-year period. I think it was the hardest I've ever worked in my life. Traditional regulation was at its peak." Then Jody Bernstein, a friend of Nancy's from her FTC days who had herself become general counsel of the Department of Health and Human Services, recommended her for the job at FDA. (Technically the chief counsel at FDA is an assistant general counsel of HHS.)

"Historically it had been a very prestigious job with considerable independence," Nancy says. "I saw it as an opportunity to do something new . . . I hadn't been politically active; that clearly wasn't a factor. Although I didn't know a lot about FDA law, I knew a great deal about the general law that agencies do. The chief counsel tends to get involved in almost everything the agency does, serving as the commissioner's policy advisor as well as legal advisor. I did both. I worked on the patient package insert regulation," she explains. "This may begin to provide fairly detailed information about the correct way to take ten classes of drugs. I worked on the particulars of that regulation and making the *mechanics* of regulation work: how you move the little leaflets from one place to another. We substantially reduced the cost of implementing regulation. There's not much recognition of exactly how much that kind of thing was done," Nancy says. "President Carter had extraordinary accomplishments in such areas."

Last fall, after having served as an alumnae trustee from 1973 to 1978, Nancy Buc was elected a Fellow of the Brown Corporation. "The offer came while I was at the FDA," she

THE CLASSES

written by Shyla Spea

13 *Mariana Breunig Bryant*, Pawtucket, R.I., celebrated her 90th birthday last October as members of the Pawtucket Congregational Church met at her home to offer fellowship and party fare. She says she is an immediate descendant of Roger Williams and, on her paternal side, of the poet Robert Browning. Since she retired from her job she has traveled widely, but now her home and many wonderful friends are her prime interest. Reading and crossword puzzles occupy many of her leisure hours.

18 *Raymond L. Wilder*, Santa Barbara, Calif., writes that the University of Michigan awarded him an honorary L.L.D. at the May commencement last year. He has written a new book, entitled *Mathematics as a Cultural System*, published by Pergamon Press. The book emphasizes the cultural aspects of mathematics from an anthropological point of view.

19 *Florence Thoma Cohnetz*, Norton, Mass., is active seven days a week teaching American folk art (which includes early American, Pennsylvania Dutch, and Norwegian decorative painting) in her home. Her students work on old bridge tables in a sunny studio on the second floor of her home. In a recent article in the *Attleboro Sun*, she was called "a purist who scorns modern quick methods, such as quick drying acrylic paints rather than the traditional oils." "You can't achieve the patina you want by quick work," she says. She often has a Wheaton student or teacher boarding with her because she likes company. A former math and Latin teacher, she says that "as long as I have the patience I won't retire."

20 *Walter Hoving* retired on Dec. 31 from his chairmanship of Tiffany & Co. in New York City. At 82 he was the oldest active head of a nationally known retail company. He is now devoting himself to investments and other interests. "I'll even play a little golf," he told the *New York Times*, "but you're not supposed to retire for that reason, so don't make much of that." He has achieved a reputation, the *Times* noted, "as a tough observer of other retailers, government bureaucracy, diamond and silver dealers, and glaring Christmas lights on city buildings," the latter a reference to the Christmas tree in front of the bank at 400 Park Avenue and 53rd Street and the festive atmosphere of Park Avenue. On his retirement he was hailed by the *Times* executive as "one of merchant's greatest geniuses."

23 *Robert C. Litchfield*, Stuart, Fla., writes that he represented Brown at an Ivy League cocktail party aboard the S.S. *Vistafjord* in the West Indies in January.

25 *Edward D. Alling*, Cranston, R.I., writes: "Although I was in the class of 1925, I quit after the second year as I had to go to saw mills to learn lumber in Palatka, Fla., and on top of old Smoky. For forty-three years I bought and sold hardwoods and cypress. I've retired, as I'm 80, so now I cut cord wood in South County. I was cutting trees in 1918 in Newport, Maine, back when a four-horse stage went to Bangor twenty-five miles away for a dollar."

Fredson Bowers, Charlottesville, Va., is the editor of *Lectures on Literature*, a series of lectures originally delivered at Cornell by Vladimir Nabokov on various British and European authors, which has been published by Harcourt-Brace-Jovanovich Brucoli-Clark. Another series of lectures, on Russian writers, edited from Nabokov's manuscripts, is being prepared for publication.

26 '26 becomes one for the 55th reunion dinner and Pops. Pembroke will join their Brown counterparts on the Hill at the Ramada Inn on Saturday evening, May 30 (with busing to and from the campus) for the class dinner and the Pops Concert. After fifty-five years it will be togetherness; we're anticipating an evening of fun and remembering. The curtain-raiser on Commencement weekend will be Friday afternoon at registration and welcome at Emery-Woolley, followed by the Brown Bear Buffet at the Refectory in the evening. The class luncheon on Saturday will be preceded by a class picture at noon and a social hour at 12:30 and will include a class meeting. *Betty Reid's* Trousset home has been our annual reunion place for years, and again we will have the pleasure of being her guests for the 55th luncheon. *Annie Carpenter Thornton* and *Helen McCarthy* are again co-chairing the 55th.

Writing in the *Mercersburg Academy Alumni Magazine* (Winter, 1980), *Mercersburg's* headmaster reflects on the late *Pratt Tobey*, who taught there, and his love of teaching. Of him and others he says: "They gave much of themselves and their lives to Mercersburg."

27 *Marjorie Knopp Golden*, West Hartford, Conn., wrote in February: "My husband, Ben, is just getting over a gall bladder operation so we are going to Florida for a few weeks to help him recuperate. I have three grandchildren in college. My oldest, Mark Litner, will graduate in June and then go on to law school. In December my

children gave me a 'special birthday' party and I was grateful to share these golden years with so many of my loving family and friends."

Webber Bly Haines writes: "After 50 years plus, my wife and I have moved from Altamonte Springs, Fla., to 1550 Via Tuscan, Winter Park. The Altamonte place is now covered with condos. My son, who practices with me, five grandchildren, and one great-grandchild all live in Winter Park. We have brought the boat around from the East Coast and am at the St. Petersburg Yacht Club."

The Rev. *W. Wyeth Willard*, Waltham, Mass., manages Camp Good News, a 211-acre religious-oriented camp which he began in 1935 in Forestdale on Cape Cod. He is also a juvenile court chaplain, chaplain to the 2nd Marine Division Association, which meets annually, and a member or officer of some thirty boards and agencies in Massachusetts. Last year he helped lead a successful lobbying effort to persuade the state legislature to reject bills aimed at relaxing the ban on Sunday retail store operations and persuaded Waltham to start a junior ROTC program in the public schools.

28 *Louisa Partington Fanale*, who has taught in the biology department of Upsala College in East Orange, N.J., for many years, is now director of health services there.

30 *Karl Stein*, Chicago, president of KES Production Co., showed his film *Brazil: Land of the Future* at Pacific Union College this year as part of the college's 1980-81 adventure series. The film shows how Brazilians live, work, and play and take the viewer through such cities as Rio de Janeiro and São Paulo.

32 Plans are underway for the 1982 Fabulous Fiftieth Reunion of the Pembroke class of 1932. Why not come to our mini-reunion this year at 11:30 a.m. on Saturday, May 30, in Emery-Woolley dining room and bring your suggestions? Make reservations with *Dot Budlong* or *Kitty Jackson*. And don't forget to return your questionnaires for our reunion history.

Wendell B. Barnes, Walnut Creek, Calif., is a licensed California real estate broker specializing in industrial realty and loan placement. He has two sons, two daughters, and seven grandchildren. He was Small Business Administrator under President Eisenhower.

Sidney Goldstein, Nashua, N.H., writes of his life-long friend and classmate *Gerald Brown* (formerly Bronstein). *Incino, Calif.*: "Look at the happy things that are happen-

to a guy whose first and abiding love has been the theatre and who made such a reputation in drama in his years at Brown and thereafter. His wife, Patricia Horn Brown, is just been tapped to fill the number-one position of artistic director at the Nina Vance Play Theatre in Houston, Texas. She and Jerry established and ran for fourteen years the Magnolia Theatre of Long Beach, Calif., a professional equity theater in which many of the theater and movie luminaries acted. Patricia served as the first director of the Theater Communications Group, sponsored by the Ford Foundation for the purpose of furthering the organization of regional professional theaters and establishing ties between them and university training programs. Their son, Jerry '84, who from his early years has served his apprenticeship in professional theater, stock companies, and movies, is pursuing his love of the theater in his studies at Brown, much to his parents' delight. Jerry and Patricia's daughter, Sarah, has for two years won first prize for individual performance in the drama teachers'-sponsored Shakespeare Festival, and this year won the first prize in the drama festival. I'm convinced," writes Ed, "all this histrionic affinity has got to be coded into the genes, and a dominant characteristic at that. The family will be setting up a second home in Houston to bring Pat closer to her work. This will pose no problem to Jerry, since his business is nationwide in scope and can be tended to from any point."

John B. Rae, senior professor emeritus at Harvey Mudd College, Pomona, Calif., has been awarded the Society for the History of Technology's highest honor, the Leonardo (Vinci) Medal. He was one of the first to offer courses specifically in the history of technology and has written extensively, especially on automotive subjects. He was also a founding member of the Society for the History of Technology, of which he has served as president.

4 Rev. Frank Clayton Barber and Ellen Lucas Angell Goff were married on Nov. 1 at the First Baptist Church in America Providence. Ellen, formerly of East Providence, is a retired business woman, prominent in business and professional women's circles. Frank, a retired Westerly clergyman, is presently owner of Kleenway in Coventry. Following the winter in Florida and the southern states, the Barbours are living in Sandview, Misquanicut Hills.

5 Geraldine Dwyer Ciesla, Webster, Mass., has been named the first woman trustee of the 113-year-old Webster Five Cents Savings Bank. She has been guidance director in the Webster school system for the past several years.

Dorothy Schloss Shutt, Boca Raton, Fla., retired in September and has been spending the getting used to leisure. She works with the local Center for the Arts and with the AUW as well as golfing, swimming, play-bridge, and reading. Her children are Hal B. Abramson, of Chicago, who works at Argonne National Laboratories, and Susan A. Griffin, of Brockton, Mass.

Dorothy has four grandchildren, Corey, 18, Kate, 21, Sarah, 11, and Berrick, 9. Dorothy's mother, Betty F. Schloss, the widow of Ber-

rick Schloss '04, is living nearby in Deerfield Beach, Fla., and at 88 is well, living alone, and staying active.

Harriet Streeter Tuttle, Mount Dora, Fla., is the author of a hymn entitled "Heavenly Father, Hear thy Children," to a tune by Franz Joseph Haydn, which won the 25th anniversary prize at the National Association of Congregational Christian Churches. It was sung for the first time by thousands at the June 1980 meeting.

Lillian Hicock Wentworth, South Braintree, Mass., reports the wedding of her daughter, 1st Lt. Frances Marion Wentworth (see '74), to George Alexander Clafflin (see '73) in September.

36 The reunion committee headed by Naomi Richman Brodsky is working full steam ahead. The exciting results pouring in give promise of a superlative 45th reunion weekend. A nominating committee has been appointed by our president Bea Minkins. It consists of Esther Kuldin Adler, chairman, Ruth Tenenbaum Sulzerman, Martha Wicks Bellisle, Margaret Walker, and Edith Hall Meier. Two slates of officers will be prepared for the annual meeting on May 30 in anticipation of our possible merger with the men's class of '36.

Helen Johns Carroll, Sumter, S.C., retired last year after fifteen years' teaching exceptional children in the city schools of Sumter, and was helped in the retirement process by Maureen McConaghy (see '74), who is operations supervisor with the Social Security Administration office in Sumter. In August, Helen visited her daughter, Deborah Norman, at Edwards AFB in California and other friends on her way. In Sumter, Helen has taken a course in the Laubach method of teaching reading and is now volunteer tutoring to help reduce the illiteracy rate of over 12 percent in South Carolina.

Theodore Tannenwald, Jr., has been elected chief judge of the United States Tax Court in Washington, D.C., for a two-year term beginning in July. He has served on the Tax Court for fifteen years. He is a member and former chairman of the board of the Hebrew Union College-Jewish Institute of Religion and is chairman of the national advisory panel of the American Jewish Committee.

37 Sigrid Carlson Muller retired in September from her position as supervisor of the social service department, which she has held since 1954, at Zambano Hospital in Pascoag, R.I. She is planning to do lots of crafts and birdwatching as well as gardening at her home in Pascoag and preparing visits to Sweden and Austria.

Ann Prestwich Wood, Buck Hill Falls, Pa., reports that she has entered her fourth year as president of the Metropolitan Historic Structures Association, which she founded in 1977. It is composed of organizations in New York City that own or have custody of historic houses. There are now forty-two member societies.

38 John C. Edgren, vice president for community affairs at Citizens Bank in Providence, is co-chairman of the campaign to raise \$2.7 million for the John Hope Settlement House, which serves minorities

Sheldon C. Noyes, Rangeley, Maine, a practicing attorney, is also judge of probate for Franklin County, Maine.

40 *Robert T. Handy* is professor of church history at Union Theological Seminary in New York City.

41 *W. Gordon Maine* is a professor of English at Lake Forest (Ill.) College and recently published his fourth book, *Stephen Crane at Brock: An Anglo-American Literary Circle of the 1890s*, published by the University Press of America.

Leon L. Traci and his bride, Norma, of Plantation, Fla., plan to attend his 40th reunion, and he hopes to see many of his old buddies.

42 *Leonard R. Burgess* writes: "I lost my first wife, Virginia, through a heart attack. Later in 1978, my father, W. Randolph Burgess '12, also died. However, recent events have been more cheerful. In December of 1979 I married Marga Minnick, and we are living in San Carlos, Calif. I am a professor of business administration at Lincoln University in San Francisco."

Andrew S. Clark, Houston, Texas, recently became project engineering manager with Bechtel, Inc., in Houston.

Bertram T. Kupsmel, Scarborough, N.Y., was recently admitted to the National Academy of Arbitrators. He has been a full-time labor arbitrator since 1974.

William B. Remington was recently promoted to senior vice president of the St. Louis-based architectural firm of Hellmuth, Obata & Kassabaum, one of the five largest architectural firms in the nation. He is the director of public relations and works in the New York City office in Rockefeller Center. Some of the firm's recent projects include the National Air & Space Museum in Washington, the Galleria in Houston, Texas, the University of Riyadh in Saudi Arabia, and the Dallas Fort Worth Airport terminals.

Joseph C. Trantham, (Ph.D.), Bartlesville, Okla., was honored recently by Phillips Petroleum Co. for discoveries and inventions leading to his twenty-fifth U.S. patent. His discoveries and inventions include methods of enhanced tertiary oil recovery involving use of underground burning, steam injection, and injection of chemicals to increase the amount of oil recovered from a producing formation.

Everett O. White is manager of purchasing for the Providence Journal Co.

43 Dr. *Enold H. Dahlquist*, associate pathologist at Rhode Island Hospital in Providence, is chairman of the Mitchell College (New London, Conn.) Parents Association.

Subil Pilshare Gladstone, Needham, Mass., writes: "While accompanying my husband on a business trip to Cuernavaca, I had a wonderful reunion with a classmate in Mexico City in January. *Betty Bernstein Leem* had arranged to meet, for the first time in 17 years, at the Hotel Camino Real. I was delighted to discover that we recognized each other immediately, that we still loved each other's company tremendously, and that our friends forged at Brown are still

strong."

Jason Z. Leeme, Woonsocket, R.I., reports that his main Brown activity is fund raising as head class agent. He is in the retail business in Woonsocket, and says, "I leave the moving to my children." His son, Dr. *Mark Leeme* '71, is practicing medicine in San Francisco, where Jason's daughter, *Diane* '74, was teaching before she started work on her M.B.A. at New York University. *Richard* '77 is a third-year medical student in Pittsburgh.

44 The Rev. *Peter Chase*, rector of St. James' Episcopal Church, Greenfield, Mass., was recently elected an honorary canon of Christ Church Cathedral, Springfield, Mass. In January he retired with the rank of captain from the U.S. Coast Guard Reserve.

Marjorie Greene Craig is teaching piano at the Cape Cod Conservatory's Lower Cape Studio in Orleans, Mass.

Marcella Fagan Hance represented Brown at the inauguration of the new president of St. Catherine's College in St. Paul on May 5, 1980. She took her first trip to Europe last fall and spent three weeks touring France by car.

Grace Hahn Holcomb, Marion Station, Pa., writes that her younger daughter, Liz, is married and living in Cromwell, Conn., and is teaching speech therapy in the Middletown, Conn., school system. Her older daughter, *Janet Solomon* '69, is living in Culver City, Calif., and doing marketing research for the Carnation Co.

Phyllis Crawshaw Paskauskas is working at Cambridge VNA and loving it. She writes, "No push-me-pull-you bureaucracy, very real. I work three days in the summer, four the rest of the year. Such a luxury. I was able to take 'fun' Audubon courses as a result. I'm going on an Audubon trip to Hudson Bay in June. My husband is retired. Daughter Julia is back in Massachusetts after two years in Florida. Son Mike hopes to become a professional diver."

46 Dr. *Myron Gordon* has been appointed professor and chairman of the department of obstetrics and gynecology at Albany (N.Y.) Medical College and obstetrician and gynecologist in chief at Albany Medical Center Hospital.

Anne Ganitt Helbig, Tampa, Fla., writes that her husband, Walter, has fully recovered from cancer. They recently returned from duty with the Peace Corps in western Samoa. Of her children — Cynthia, Ernesto, Santiago, and Cheryl — three are in the legal profession, either as attorneys or paralegals, and the fourth is director of Indian affairs for HUD in Denver. Anne is an accountant in a small city in Florida "where there are so many orange groves the whole city smells like orange juice."

Juhamme Heller Prager, Arden Hills, Minn., who has worked for 3M for twenty-eight years, has been appointed executive director of technical information and technology analysis. She continues her duties in charge of the sixty-five-person corporate technical planning and coordination department. She is a trustee of Brown.

47 Rev. *Norman F. Brooks*, Harvard, Nebr., became the pastor of the United Church of Christ in Harvard on

March 1. He had served two churches in Fond du Lac.

Dr. *David M. Collins* has been appointed director of clinical research-central nervous system at the Pharmaceutical Research Division of Schering-Plough Corp., in Bloomfield, N.J. He joined the company as assistant director of medical research in 1973 and has served as an associate director and senior associate director. He and his wife, Jeanett, and their daughter live in Rahway, N.J.

Constance Coulter Hunting is the writer-in-residence at the University of Maine, Orono and is the editor of the *Puckerbrush Review*, which began appearing in the spring of 1978. In it, she reviews the works of Maine writers and poets. The Puckerbrush Press, which Constance founded, is one of the most active small presses in Maine.

48 *Leopold Adler II*, investment broker and historic preservationist, has been named to a five-year term as a trustee of Boston University. He is chairman of the Cranston Development Corp. of Savannah, Ga., Pittsburgh, Pa., and Columbus, Ohio.

John E. Johnson has been promoted to chief engineer at Republic Steel Corporation's Cleveland District steel plant. He has been chief engineer at the Buffalo District steel plant.

Dr. *Paul Rosch*, Yonkers, N.Y., was the recipient of the 1980 International Distinguished Service Award from the America Rural Health Association. He is chairman of the board of the International Foundation Biosocial Development and Health.

49 *Constantine E. Anagnostopoulos* became head of the Monsanto Europe-Africa Division of Monsanto on January 1. He had been general manager of Monsanto's world-wide rubber chemicals businesses before moving to Brussels, where Monsanto Europe-Africa is located.

John C. McClam, Dallas, has been appointed vice president for marketing of Transport Life Insurance in Fort Worth.

50 *Joseph A. Farrell III* has been appointed senior vice president of the Pullman Power Products Division of Pullman, Inc., in Williamsport, Pa. He is responsible for most division staff activities, including legal, quality assurance, personnel, planning, joint venture and subsidiary management, and regulatory requirements. He had been vice president for government affairs since joining the division in 1977.

Thomas B. Grigun, a partner in the Meaden, Conn., law firm of Grigun and DeFrances, has been elected to the board of governors of the Connecticut Bar Association for a two-year term.

51 *Stephen S. Barnett* and *Helen Smith* were married Sept. 6 at Dartmouth College. He is vice president and treasurer of the U.S. Division of Hutschenreuter, in North Brantford, Conn. She is a graduate of Smith College and received her Ph.D. at the New School for Social Research.

Alvin J. Brody, a New Bedford, Mass., attorney, has been named an assistant register of probate for the Bristol County (Mass.) Probate and Family Court.

Former Cranston, R.I., mayor *James D.*

ete became the probate court judge in the city in January. He has his own law firm, James DiPrete, Jr., and Associates, in Cranston.

Beverly Hillman Eckhardt (Sc.M.), Lincoln, Mass., has been appointed Lincoln's director on the board of directors of Minute-Man. She is serving her second three-year term on the Council on Aging of Lincoln and has served since the council's inception. She works on publications and edits the newsletter.

Catharine Patch Gravel, Enosburg Falls, N.Y., has been appointed regional librarian at the Northwest Regional Library in Georgia, U.S.A.

Bruce Hausman, vice president of Belding Heminway Co., New York City, has been appointed corporate counsel and elected senior vice chairman, a newly created post. Belding Heminway produces high technology threads and specialty fabrics.

52 Dora Bucco Lingen, Cincinnati, Ohio, is taking graduate courses in education at Xavier University in Cincinnati for her teacher's certificate for high school math.

R. Edward Searles is manager of the commercial lines department of the Herbert Lewis Insurance Agency, in Walpole, Mass.

Richard C. Sprinthall, director of the graduate psychology program at American International College in Springfield, Mass., has had a new edition of his college textbook, *Educational Psychology: A Developmental Approach*, accepted for publication.

53 Charles Benson, Painted Post, N.Y., is manager of Iszard's Arnot Mall store in Horseheads, N.Y. Iszard's Stores, founded in downtown Elmira in 1904, offer fashion for family and home.

Reece T. Clemens has been named vice president of marketing and sales for General Highway Express, in Sidney, Ohio. He has been with General Highway Express for five years and has served as division marketing manager and vice president of national accounts.

John Flanders has been promoted to quality control manager for Collins & Aikman's Carpet Division, in Dalton, Ga. He previously was on the industrial engineering staff.

Biweekly departures. Write/call collect (305) 448-1661.

VIKING TRAVEL inc.
250 Catalonia Ave., Coral Gables, Fla. 33134

Paul A. Goldman has been elected to membership in the 1981 President's Club of Kemper Insurance Companies. He is associated with Paul Arnold Associates, in Livingston, N.J., where he lives with his wife, Pam, and daughters Ilene and Laurie and son Hal. President's Club membership "is based on achieving an outstanding standard of service and sales to regional policyholders."

Edward A. Johnson, New London, N.H., writes that "I am now the principal of Kearsarge Regional High School in North Sutton, N.H., a conservatively progressive school of 550 students where good things are happening."

George Smith and his wife, Janet MacPhail Smith '55, South Hadley, Mass., report the birth of their first grandchild, Nathaniel MacPhail Hansen, who was born to their daughter, Christine Hansen, on Jan. 16.

Dale Strand has joined West Advertising as president of the Billings, Mont., firm. He had been president of Dale Roberts Division of Quorum Associates in New York for five years.

54 Thomas Cashill, Barrington, R.I., regional manager of Burlington Industries, was a coordinator in Barrington for the Rhode Island Reagan-Bush campaign last fall.

Robert di Curcio lives on Nantucket Island, where he is an amateur sculptor and an art collector. He taught at the Loomis School in Connecticut for eight years before retiring to Nantucket.

David Q. Kearney, Newfane, Vt., recently joined F. L. Jenness Real Estate in Brattleboro, Vt. He formerly worked for Edward T. Kearney and Sons Builders on Long Island and later formed Eastone Associates, a renovator of brownstones in Manhattan.

Cameron H. Sanders, Jr., Washington, D.C., writes: "I would like to resurrect myself from the lost alumnus category. We are a Foreign Service family and have been in and out of the country a number of times in past years—in Baghdad, Rotterdam, at NATO in Brussels, a year on a State Department fellowship at Columbia's School of International Affairs, interspersed with assignments to the department in Washington, where I am now—in the Bureau of International Organizations' Affairs (United Nations)."

Barbara Casparian Sarkesian, North Scituate, R.I., writes that "Brown is well represented on the North Scituate public library board: Jane Walsh Folcarelli '47 is vice president; John Gorham '54 is a trustee; Janina Barlowski D'Abate '43 is librarian; and I am the secretary."

55 Arva Rosenfeld Clark, Lexington, Mass., has been appointed executive director of the Greater Lowell (Mass.) YMCA.

Robert D. Fitzgerald, Lake Forest, Ill., was named corporate treasurer of Fiat-Allis, of Deerfield, Ill., and is responsible for directing the company's worldwide treasury operations. He also serves as treasurer for the Fiat-Allis operating companies. He had been vice president and division administrator in the Corporate Banking Group of Harris Bank in Chicago.

Thomas F. Jones, Jr., Wilmette, Ill., has

been elected a senior vice president of Harris Bank in Chicago. He directs new client services in the bank's Personal Trust Group. Active in civic affairs he is president of the Brain Research Foundation in Chicago.

Janet MacPhail Smith and her husband, George Smith '53, South Hadley, Mass., report the birth of their first grandchild, Nathaniel MacPhail Hansen, who was born to their daughter, Christine Hansen, on Jan. 16.

Thomas A. Westbrook has been appointed to Hartford (Conn.) National Bank's East Hartford Advisory Board. He is president of the Hartford Clamp Co., in East Hartford.

56 Our Reunion Committee has spent many long hours refining plans for our 25th. You have heard from us through the mail, and we have been keeping you posted for the past year in the *BAM*. So far many of our classmates have said they plan to return. So, for the final time, here again is the official Friday through Monday list of reunion events: *Friday* (May 29) — Registration at Faculty Club (reunion headquarters); welcoming reception at the Faculty Club, with special greetings from President Swearer; buffet dinner in the List Art Building; Campus Dance, to be followed by afterglow at the Faculty Club. *Saturday* (May 30) — '56 Forum Brunch at Orwig Music Building; Pembroke luncheon for the women of the class of 1956 in the Crystal Room; class of 1956 25th Reunion "re-run" at noon (fun runs of 2.5 miles and 5.6 miles); Field Day at Aldrich-Dexter; cocktails dinner at Andrews Terrace and Dining Hall; Pops Concert; afterglow and dancing, Faculty Club. *Sunday* (May 31) — Continental breakfast, Faculty Club; tour and lobster bake at Hammersmith Farm (Newport); Brown "Downtown" dinner at the Biltmore; Dixieland jazz concert at West Quad Lounge. *Monday* (June 1) — Brown's 213th Graduation — cap off your great four-day weekend with a march "down the Hill" with all of your classmates. Luncheon to follow. What better way to "kick off" your summer than with an educational, warm, festive, and fun-filled four-day experience with many great memories and renewed friendships. See you . . . from May 29-June 1.

57 Remember the 25th: June 4-7, 1982.

Claire Hokenson Finnegan, sales associate in the Madison, Conn., office of the Beazley Co., realtors, exceeded \$1 million in sales during 1980. Twice a member of the Two Million Dollar Club, she has been a member of Beazley's sales staff since 1976.

Richard Godfrey, Pacific Palisades, Calif., reports that he met Tilt Gardiner earlier this year in Los Angeles and caught up on the last twenty years. Tilt, Dick writes, is "looking amazingly fit and young for his age."

John Hale's experience as a Durango, Colo., policeman illustrates a section of the textbook, *Psychology for the Classroom* (published by Prentice-Hall in January), in which his experiences are used as an illustration of the application of classroom learning to the outside world. John (*BAM*, May 1980) is a professor of psychology at Fort Lewis College in Durango.

William Haslam has been appointed general manager of Prime National Publishing in Weston, Mass. He, his wife, and their two children live in Groton, Mass.

David Kaplan writes: "Both our boys are at Belmont Hill School and the pre-college scene is at hand. Our wholesale furniture business in Boston, Kaplan & Fox, is now eight years old and growing nicely."

John R. Che, Cambridge, Mass., reports that 1980 was an extraordinary year in many respects. He spent two weeks in March backpacking in the Peruvian Andes with his son. *Fortune*, 13. In June, John was promoted

to senior partner of Hale and Dorr in Boston, and in August was a speaker at the annual meeting of the American Bar Association in Honolulu. John and Judith J. Stackpole, formerly of Augusta, Maine, were married in September.

Capt. Harold J. Sutphen, USN, Alexandria, Va., writes that he had a "most enjoyable reunion with Tony Newell and Harvey Sproul at the Cornell game, which was made all the better by Brown's victory."

Lawrence Waterman, Miami, Fla., is director of tour development for the Florida region with Pan American World Airways in Miami. Larry recently completed twenty years with Pan Am.

Robert P. Zimmerman and his wife, Becky, of Bellevue, Wash., report the birth of Susan Eve on Oct. 18, 1978. They have three other children, Mike, Amy, and Sharon. Bob has been with Boeing for twenty-two years.

58 Edouard P. de Merlier reports that the 1916 Rose Bowl poster (Brown vs. Washington State) is reproduced in a pictorial history of Los Angeles, which is on display in Pershing Square in downtown Los Angeles during the city's bicentennial celebration, which continues through September. The poster is in a segment devoted to the early 1900s. Ed is president of de Merlier Reynolds & Associates, executive recruiting consultants in Los Angeles.

Dr. Martin L. Feldman, his wife, Caryl-Ann Miller Feldman (see '59), and their son, Andrew, 16, recently returned to Newton Centre, Mass., from a semester's sabbatical abroad. Martin was a visiting scientist in the anatomy department at Cambridge University in England, conducting research on the heart. After giving papers in Amsterdam and Brussels, he went on to Frankfurt, where he was involved in brain research.

Warren R. Healey, Simsbury, Conn., recently joined the real estate investment division of the Travelers Insurance Co. as general manager of Constitution Plaza, an office and commercial complex in downtown Hartford. His daughter, Candace, is a freshman at Brown.

Bernard Masterson (A.M.) is visiting assistant professor of fine arts at the Newport College-Salve Regina. He is the founder and director of the Young People's School for Performing Arts in Providence.

59 John F. Ballard, Maitland, Fla., has been re-elected president of Village Realty of Winter Park, Inc., with offices in Orlando, Winter Park, and Altamonte Springs.

Caryl-Ann Miller Feldman, her husband Dr. Martin L. Feldman (see '58), and their son, Andrew, 16, recently returned to Newton Centre, Mass., after a semester's sabbatical abroad, during which she studied and presented seminars at museums in England and France. Caryl-Ann and Joan Appel Lester recently returned from Mexico City, where they were part of the U.S. delegation to the International Council of Museums. Caryl-Ann was conference chairman of the committee on educational and cultural action. She is manager of resource services, and Joan is curator of collections at Boston's Children's Museum.

Frederick J. Fleroni, Jr., Buffalo, N.Y., pro-

fessor of political science at the State University of New York at Buffalo, has recently published an expanded second edition of his textbook entitled *The Conduct of Soviet Foreign Policy*. An earlier book, *Technology and Communist Culture: The Socio-Cultural Impact of Technology under Socialism*, constitutes the proceedings of an international conference he convened at the Rockefeller Foundation Study and Conference Center, Villa Serbelloni, at Bellagio, Lake Como, Italy, and which was sponsored by the Planning Group on Comparative Communist Studies of the American Council of Learned Societies.

Dr. Albert F. Johann, Jr., and his wife, Jacqueline, of Ridgewood, N.J., report the birth of Kathryn on March 23, 1980. They have two other children, Jennifer, 8, and Nancy, 3. Albert is a class agent and NASP worker. His dental offices are in Passaic, N.J.

Sally Spaugh Mahan, Bloomington, Ind., was elected last Nov. 4 to a four-year term of the school board of Monroe County School which include Bloomington. She based her campaign on articulating parental unhappiness about poor quality programs in the schools. She continues to serve as the Brown NASP recruiter for southern Indiana.

Jane Cayford Nylander is curator of textile and ceramics at Old Sturbridge (Mass.) Village and adjunct associate professor of American and New England studies at Boston University. Part of her research is involved with the Thanksgiving tradition. "The Fourth was a more respected holiday but I imagine Thanksgiving to have been the greatest holiday of all back then," she says.

Robert Rogers, Teaneck, N.J., assembled and conducted a volunteer chamber orchestra for an all-day program of events honoring the 80th birthday last November Aaron Copland. The event was sponsored by The Symphony Space, Inc., a non-profit community-sponsored center for the performing arts in New York City. The orchestra played "Quiet City" and music composed from motion pictures by Copland, the first major American composer to work in films.

Douglas E. Rollings, Orange Park, Fla., has retired from the Navy after twenty years and has joined the Jacksonville/South agency of National Life Insurance of Vermont as a career representative.

Charles Simberg, Fords, N.J., has been appointed president of J. I. Kislak Realty Corp., Newark, where he had been director of Kislak Realty's Industrial Properties Division. Anthony G. O'Farrell (Ph.D.), professor of mathematics at St. Patrick's College, in Maynooth, Ireland, is visiting professor in analysis at the University of Connecticut at Storrs this year.

Peter J. Olver, Golden Valley, Minn., is an assistant professor of mathematics at the University of Minnesota. He and his wife, Cherrad Shakiban (see '79), have a daughter, Parizad June, 1.

Lillian Lim Quon and her husband, Peter Quon, Jr., of San Diego, Calif., report the birth of their first child, Peter Lim, on Oct. 26. His honorary godmother is Linda Chen. Both Lillian and Peter are attorneys for the California Department of Justice in San Diego and are active in the Pan Asian Lawyers Association of San Diego (he is a past president) and in the Union of Pan Asian Communities (he is a member of the board of directors). They spent some time in London and Paris last summer with Linda Chen and Terry Pellmar.

Phyllis Gizelle Rabineau (A.M.) is custodian of collections at the Field Museum of Natural History in Chicago. Her feather exhibit drawn from the archives of the Field Museum was in San Francisco this fall and winter at the California Academy of Sciences. The exhibit included emu shoes, feathered oversize shoes worn by a western Australian medicine man at night in the enemy camp to cast a spell to discourage fighting back, and a northern California "medicine" woman's headband made with sixty-nine hummingbird breast skins by the Karok tribe.

Lt. Christopher Alan Sales (USN) and Michele Miller were married on Feb. 13 and are temporarily living in Durham, N.C. He is a lieutenant in the Navy, stationed in Naples, Italy. He has resigned his commission effective July 1981, when he and Michele, a Duke alumna, plan to move to the West Coast.

Bradford H. Warner has been named vice president in the investment division at the First National Bank of Boston. He and his wife, Pamela, live in Scituate, Mass.

1 F. Gregory Ahern, Providence, has been named a manager in the trust investment division of Industrial National Bank in Providence, where he is responsible for the business development department of the division. Previously he was Rhode Island Hospital Trust National Bank. He is president of the Traveler's Aid Society of Rhode Island and a director of the Hill Center in Providence.

Dr. Jeffrey Austerlitz ('78 M.D.) and Anne L. Sherman were married Dec. 28 in St. James Chapel and are living in Providence, where he is completing his third-year residency at Roger Williams General Hospital. She is employed by the Metropolitan Nursing Association.

John B. Blum, an assistant professor of chemical science and engineering at Rutgers University, is also the program director and chief advisor of the newly dedicated Glenn Dowd Laboratory for Electronic Ceramic Research in the department of ceramics at Rutgers. John, Penny Nixon Blum, and their daughter, Jennifer, are living in East Brunswick, N.J.

Sally DeLong Bolmer is a postdoctoral assistant in the nutrition and food science department of MIT. She received her Ph.D. in biological chemistry from the Pennsylvania State University College of Medicine at Hershey in 1979. While at Hershey, she assisted in the development of a cancer-detection assay that the Warner-Lambert Company has since been licensed to develop further. If successful and if approved by the FDA, Warner-Lambert could market the test commercially.

John W. Brennan, Jr., and Joan Elizabeth were married Oct. 4 in Norwichtown, Conn., and are living in Foxboro, Mass. He is a musician with Omega Industries, of Foxborough, Mass.

Samuel J. Docknevic and Laurie A. Hart were married in Woodbridge, Conn., on Aug. 9 and are living in Milford, Conn. Sam is general manager of England Cycle Sales, Inc., and Laurie is a bilingual case worker for Info Line of New Britain. John Hollyday was best man at the wedding. Also in attendance were Michael Hoffman, Julia Vrooman, Joseph Halloran, Dr. Bill Cohen, and Thomas Vienmeau '73.

Stephen Cary Drew and Margaret Maire were married Dec. 19 in Tucson, Ariz. He graduated from the University of Rhode Island, and she is a graduate of Arizona State University and the American Graduate School of International Management, in Glendale, Ariz.

Gary W. Ellison and Patricia Bailey, a professional writer, were married on Aug. 30 in Middletown, Ohio, and are living in Columbus, Ohio. He is a realtor with C. V. Perry Co., of Columbus. Attending the wedding were Laurel Ellison '79, Judith Ellison '76, Robert M. Sinche '76, and Thomas Mahoney '73.

Steven H. Feinsilver ('77 M.D.), East Palo Alto, Calif., is a fellow in pulmonary medicine at Stanford University Medical Center.

Edward A. Herbert, Portland, Oreg., writes that after "working the street" with the Portland Police Bureau for five years, he is now working in the personnel office, hiring new police officers. His wife, Beverly,

counsels youth at the nearby Youth Service Center.

Michael Lukens (Ph.D.) is assistant professor of religious studies at St. Norbert College, in De Pere, Wis.

Ann Baird McClenahan and David Harman LeBreton were married Oct. 4 in Bryn Mawr, Pa. She is an account supervisor with Earle Palmer Brown & Associates, a Washington, D.C., advertising agency. He is an editor with F-D-C Reports, a health-care-industry trade publication in Washington.

Maureen McConaghy, operations supervisor with the Social Security Administration office in Sumter, S.C., was named Sumter's Young Career Woman for 1980 by the Sumter Business and Professional Women's Club last November. She and her husband, Robert Thunell, a professor of marine geology at the University of South Carolina, live in Columbia.

William Peipicello (Ph.D., '73 A.M.), associate professor of classics at Temple University, has been named chairman of the department. Last year he was instrumental in restoring the teaching of Latin in Philadelphia public schools.

Karen Scholle, Chestnut Hill, Mass., received her M.S. in education and a school psychology certificate from Pace University in New York City in 1976. After teaching for three years at Wrentham (Mass.) State School for the Retarded, she is now working as a school psychologist with the Boston Public Schools. She writes: "My job is in a special school for deaf and hearing-impaired children. I'm really enjoying the new world of sign language and hope to stay with this specialty for a long time."

Jeffrey Schwartz, Brookline, Mass., former director of planning at the Merrimack Valley Health Planning Council, has become deputy director of the council. He also assists the agency with management and personnel functions.

Gary M. O'Dea '78, Boston, a former president of Alpha Delta Phi at Brown; Jan. 7. Survivors include his mother, Mrs. Jan. M. O'Dea, 37 Highland Ave., Northampton, Mass. 01060. Contributions may be made to the Gary M. O'Dea Memorial Fund at Northampton High School, Northampton 01060.

NANCY BUC *continued*

recalls. "Someone came into my office and said, 'It's the president' and it caused quite a stir. It turned out to be Howard."

Nancy has embraced the opportunity to serve Brown with gratitude and verve. "I applied to Radcliffe, Pembroke, Goucher, and Pitt," she says. "The ladies at Radcliffe felt that Radcliffe was a very special place and only very special people belonged there. The Pembroke ladies' view was that Pembroke was a wonderful place and everybody should go there. That proved to be fairly accurate," Nancy says with affection, "and I loved it. I always loved it. But what do you think my immigrant Jewish grandmother would think if she knew that I had succeeded John Nicholas Brown? I mean, I always liked John but to succeed him?"

Nancy's tenure at the FDA proved unexpectedly short. "I joined in November 1979 before the hostages were seized and I thought we'd win the election." Instead she resigned effective January 20, 1981, and rejoined her old firm in Washington. "It was a terrific experience," she says. "I've understood for the first time what academic sabbaticals are all about and if my personal experience is typical — I'm not sure — I think everybody should do that."

"Why go into government?" she asks. "The frequency of issues like to shock and patient packaging is very high and it's like a drug — no question about it. It is just absolutely engrossing to spend your day doing something like that. There's nothing like it. Jody Bernstein or Pat Harris or Caspar Weinberger would say the same thing. That's why people don't leave Washington. It was so exciting, so interesting, so much fun. It was like baseball players used to say: I'd have paid them."

Of Words and Deeds

This is the time of year to thank all of you who have been busy spreading the word for Brown these many months. For the words, again, have worked — and Brown this year had 11,800 applicants, and you succeeded in interviewing over 8,000 of them.

You also spread the word by awarding Webster's Collegiate Dictionaries to promising high school juniors for top performance in English — and that will certainly help in attracting the kind of alert students we'd like to hear from next year. In fact, that Brown Book Award is a wonderful bit of imagery for your favorite University. It says we care about excellence (call it dedication) and we welcome students who enjoy the richness of the language and the meaning of things. Who says running to a dictionary (or to a library) has to be pedestrian?

We who work with Brown's National Alumni School Program (and NASP, as you know, is part of the Associated Alumni which believes that many arms make light

work) really rely on that network of some 3,500 Brunonians who contact and cultivate schools for Brown. The Admission Office can't do it all — and you also bring the local touch to an interview.

If you'd like to know more about NASP's work across the country — and about how "going local" enables Brown to "think national" — please write to: Tom Hassan, NASP Director, Box 1859, Brown University, Providence, RI 02912.

And ask about giving a Brown Book Award next year (a good student wins a dictionary, a good Brunonian gets to present it).

Those "interviews" with applicants, by the way, are really vital to Brown. It makes us more than just a place. It makes us a person!

The Associated Alumni of Brown University

Join in — you'll enjoy the work.
